DELIVERY INFORMATION

It normally takes 35-75 days till shipment of the goods after receipt of your purchase order and payments.

MINIMUM PACKAGING UNIT

Each clutch is packed in an individual carton box. The minimum number of packing unit per carton is listed in DIMENSIONS & PACKING LIST. The order quantity must be in multiples of the listed QTY (pcs) PER CARTON.

MINIMUM ORDER AMOUNT

Not less than US$10,000.00 or ¥1,000,000.-.

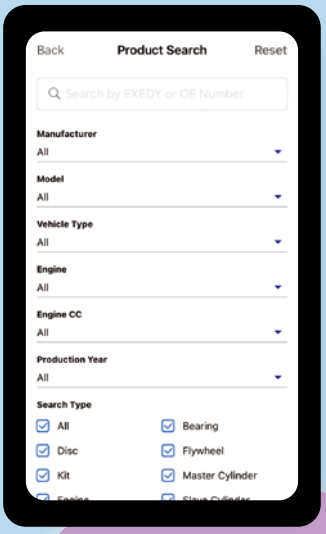

FRICTION FACING

There is a possibility that friction facings are changed because of new development or procurement problems.

IMPORTANT NOTICE

The purpose of this catalog is to provide our customers a list of clutch parts requirements as complete as possible. All listings, applications and interchange have been complied as carefully as possible with all available information. However, we cannot assume any responsibility for possible errors in listings, applications or interchange.
Original manufacturer's trade names and parts numbers in this catalog are for reference only.

The leading company for drivetrain components

EXEDY is a general drivetrain systems manufacturer with a main focus on automotive clutches and torque converters, which we manage from development to production.
With our core technologies specializing in friction, vibration and fluid, EXEDY's products have been greatly recognized by car manufacturers around the world and widely adopted as a genuine brand.
EXEDY Group continues to hold a large share in both domestic and international markets, with 44 companies in 25 countries.

AT Products

EXEDY manufactures torque converters and clutch packs, providing today's drivers with a smooth and comfortable ride. Our Super Squashed Torque Converter, which is very efficient and grounded in hydrodynamics, has been making great advances in the American and Chinese automotive markets.

Torque Converter

Hybrid Vehicles

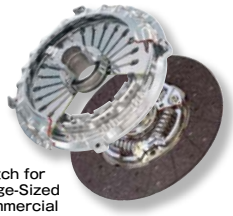

Clutch Packs

Paper discs

MT Products

EXEDY Group members manufacture clutch covers and clutch disc assemblies around the world. EXEDY also develops dampers with very efficient noise and vibration control, as well as high performance motor sports clutches.

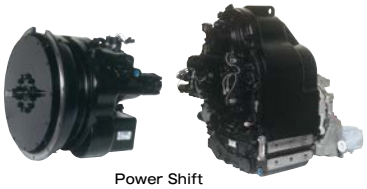

Clutch for Passenger Vehicles

Clutch for Large-Sized Commercial Vehicles

Sports Clutch

TS Products

EXEDY supplies uncompromising, high-quality products with virtually made-to-order, multi-item, small-sized production. EXEDY's power shift transmission for construction and industrial vehicles powerfully supports Japan's key industries.

Power Shift Transmission

Retarder

Motorcycle Products

EXEDY manufactures motorcycle clutches in the rapidly expanding markets of Southeast Asia. Utilizing our expertise accumulated in automotive clutches, EXEDY Group companies in the region produce and supply Wet Type Multi-Plate Clutches and One-Way Clutches for motorcycles.

DSP Wet Type Multi-Plate Clutch

Wet Type Multi-Plate Clutch with Coil Springs

Dry-Type Centrifugal Clutch with Pulley

Wet-Type Centrifugal Clutch

One-Way Clutch

EXEDY's Latest Technology

Direct Drive iSG

As a part of our electrification efforts, we have independently developed the iSG (integrated Starter Generator) that directly drives the engine without the use of a belt. With this technology we aim to achieve improved fuel efficiency by reducing friction loss, save cost and space by eliminating and consolidating components.

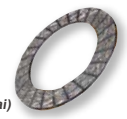

Universal e-Drive Unit

EXEDY is developing a highly versatile electric drive unit that can be used in a variety of mobility.
Examples of application: Pallet jack, cargo trolley, wheelchair, etc.

Peripheral technologies that enhance the level of perfection of our main products.

Friction performance evolution, beyond boundaries

UF-EVO
ULTRA FIBER-EVOLUTION

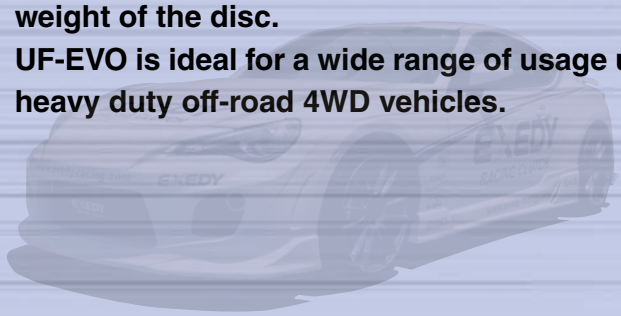

Newly developed organic facing

- Improved wear resistance in the hightemperature range
- Secure coefficient of friction in all temperature ranges
- Improved heat resistance by 2 times as much as genuine equivalents

We managed to improve wear resistance in the high temperature range by using light-weight, ultra-high-strength fibers that are also used for body armors. Further, by reviewing the formulation of the organic friction material, we were able to secure a friction coefficient comparable to that of metal friction material, while at the same time reducing the weight of the disc.

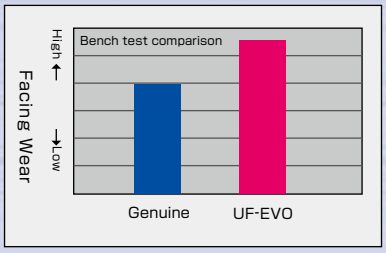

UF-EVO is ideal for a wide range of usage under high load conditions, from sports cars to heavy duty off-road 4WD vehicles.

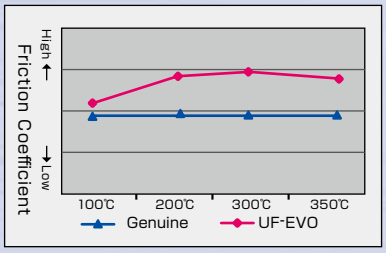

Improved wear resistance at ultra high temperatures

Uses high-heat-resistant and high-strength fibers. Suppresses the increase in wear, even in the high temperature range, providing stable performance at all temperatures.

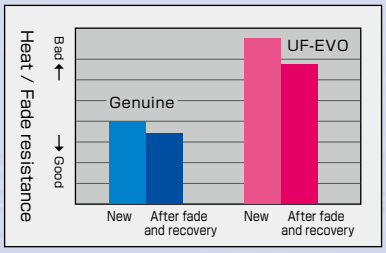

High coefficient of friction at all temperatures

Friction coefficient from normal operating range of 100°C to the high temperature range is significantly higher than conventional facings. By ensuring easy starting, the loss of power transmission is minimized. It extends clutch life.

Improved heat / fade resistance

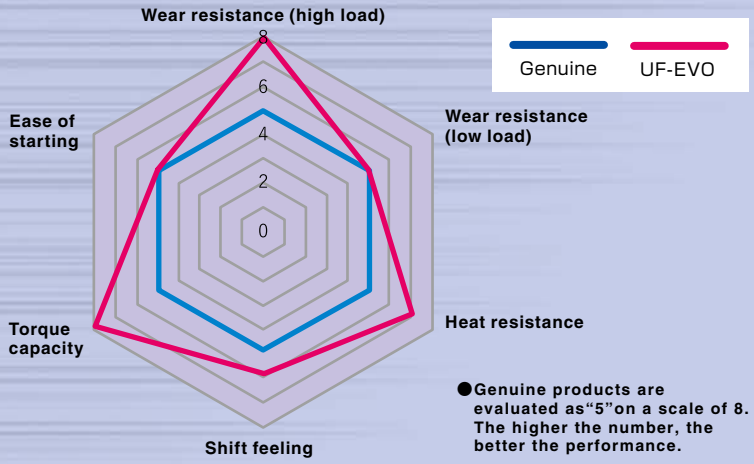

Clutch discs with organic facing usually tend to fade and drastically lose its efficiency, when used on slopy roads with traffic congestion. UF-EVO is minimizing the performance deterioration as heat resistance has been improved by 2 times compare to genuine equivalent.

Excellent performance in conditions of:

- ☑ **Mountain roads, off-road tracks, snowy roads**
- ☑ **Carrying heavy items**
- ☑ **Driving in urban areas with frequent traffic jams**
- ☑ **High frequency of half-disengaging clutch**
- ☑ **Half Clutch Driving**

Friction material performance comparison

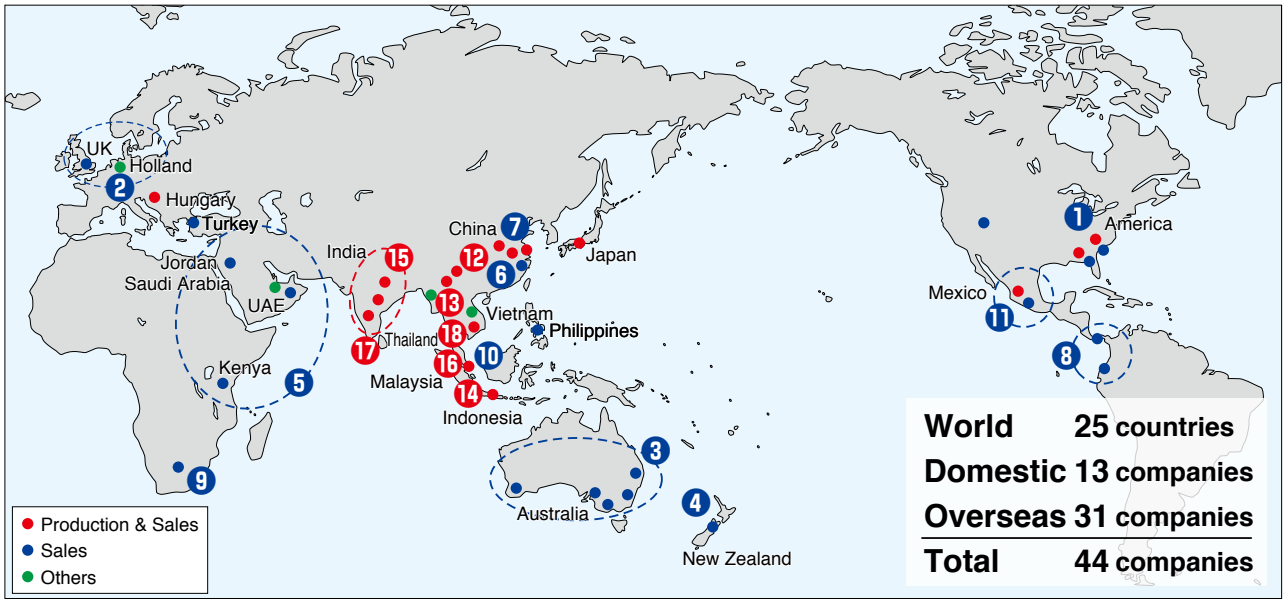

●**Genuine products are evaluated as"5"on a scale of 8. The higher the number, the better the performance.**

Functions of Clutch

1. Transmit/cut off the torque from the engine to the transmission
2. Make vehicles to move by delivering the power from engines smoothly
3. Absorb transmission vibration
4. Protect vehicles from abnormal power

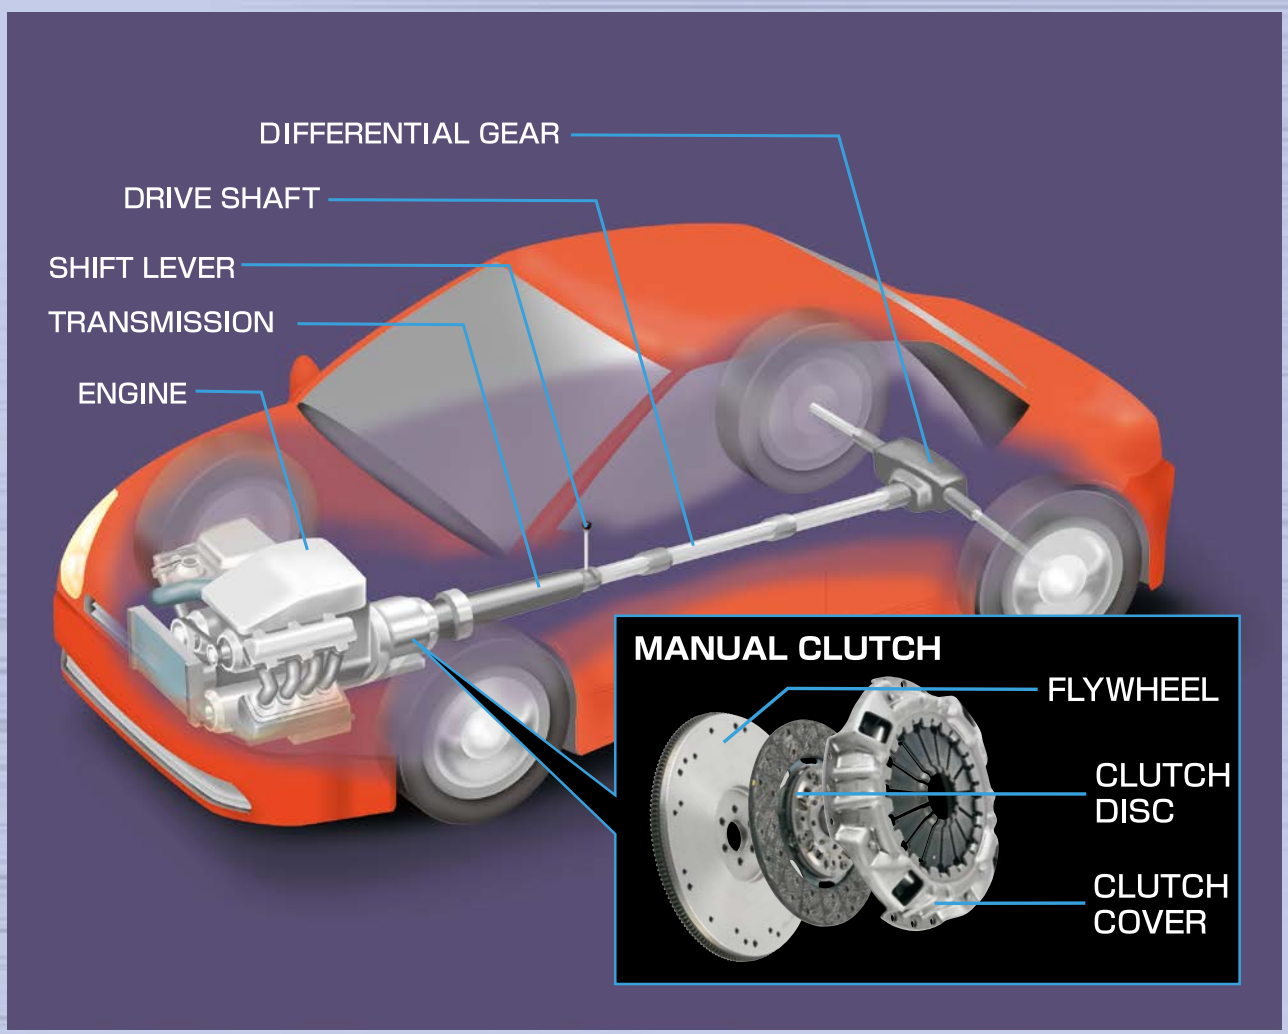

CLUTCH DISENGAGED

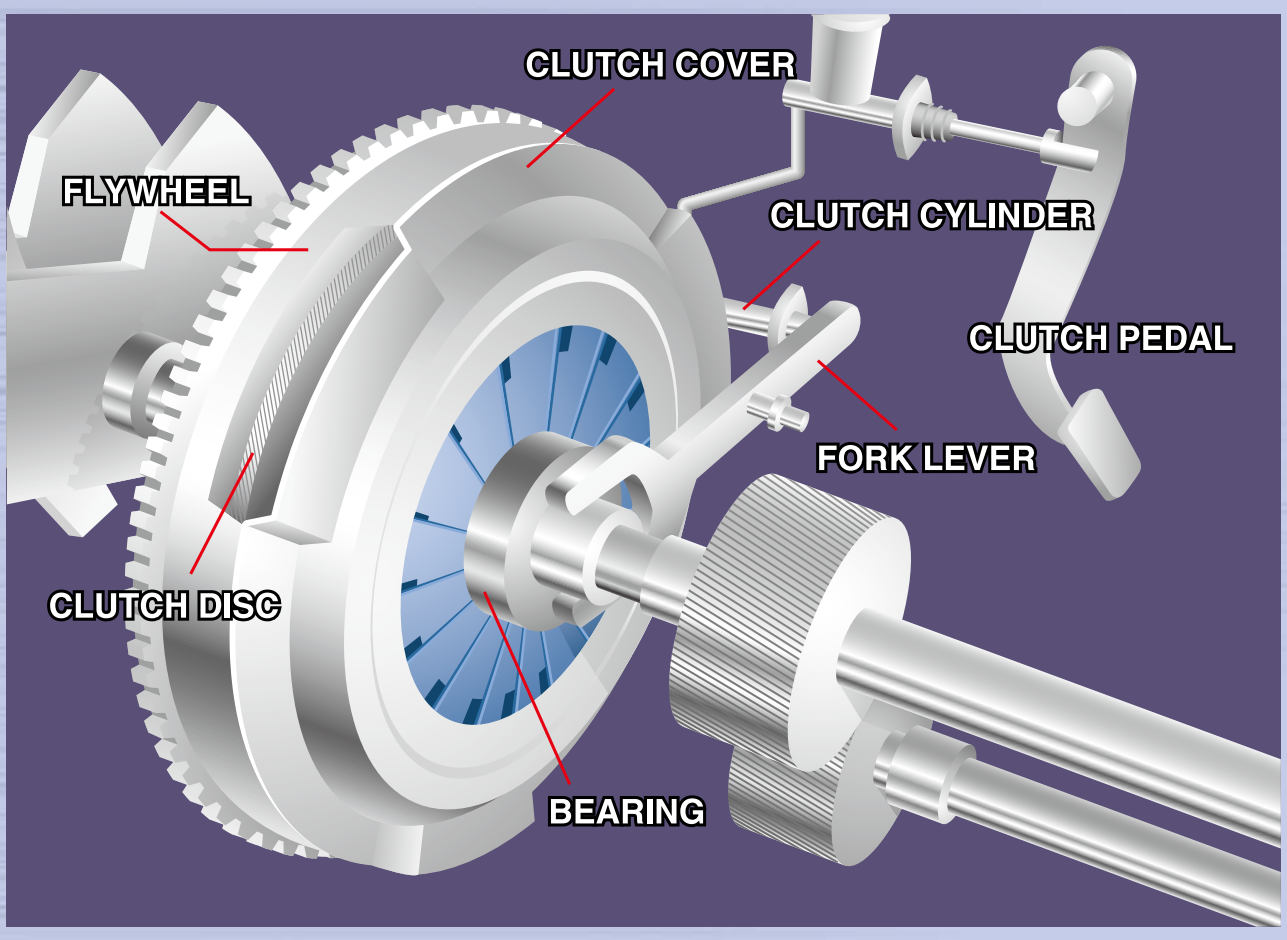

CLUTCH ENGAGED

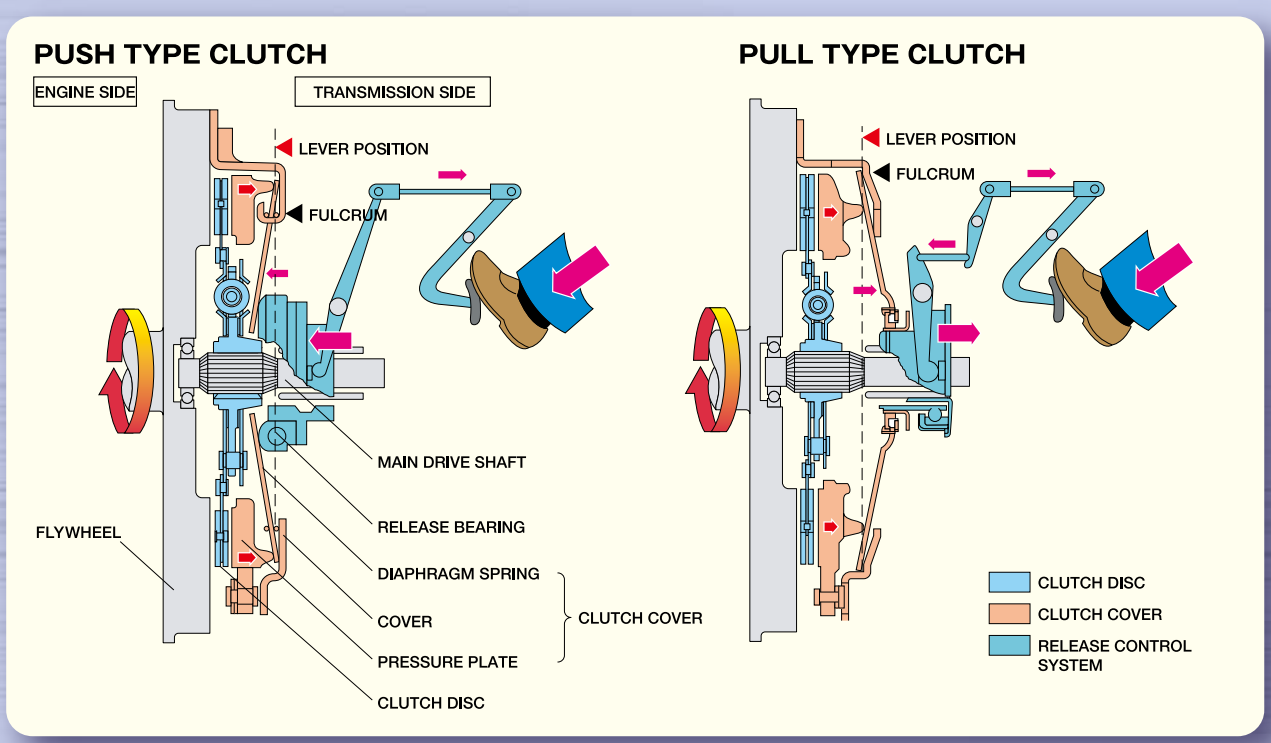

Structure of drivetrain and clutch

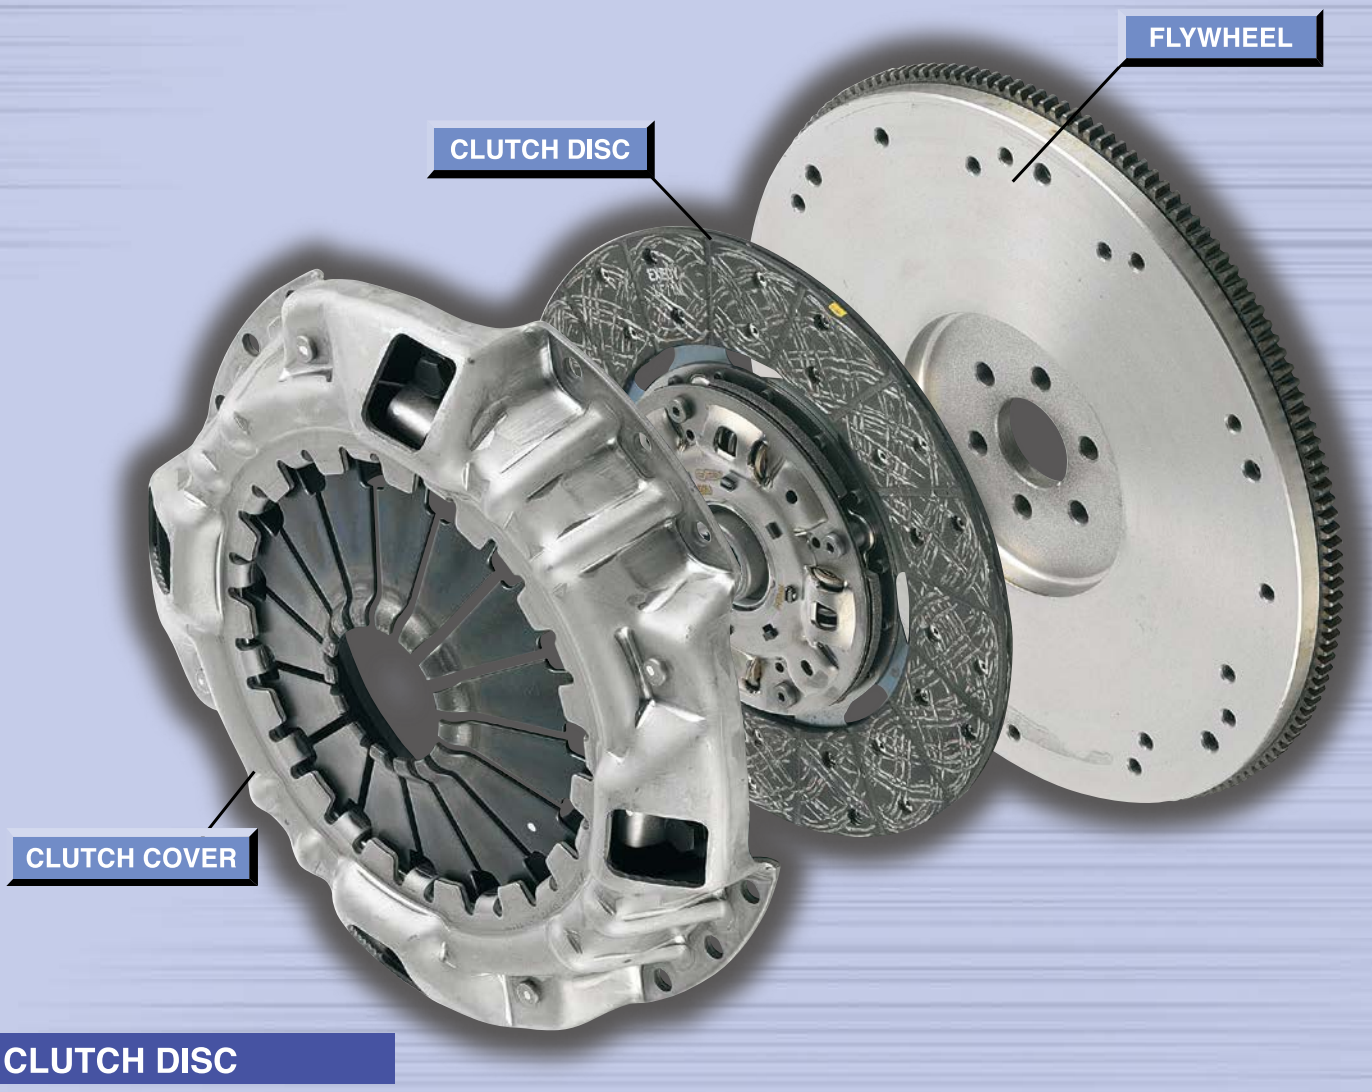

Push type manual clutch assembly

When the clutch pedal is pressed, a cable or hydraulic piston pushes on the release fork, which presses the throw-out bearing against the middle of the diaphragm spring. With the spring pushed, the clutch disc is then disconnected from the rotating flywheel that is attached to the engine. When the pedal is released, the disc will engage with the flywheel and transmit the torque from the engine to the rest of the transmission.

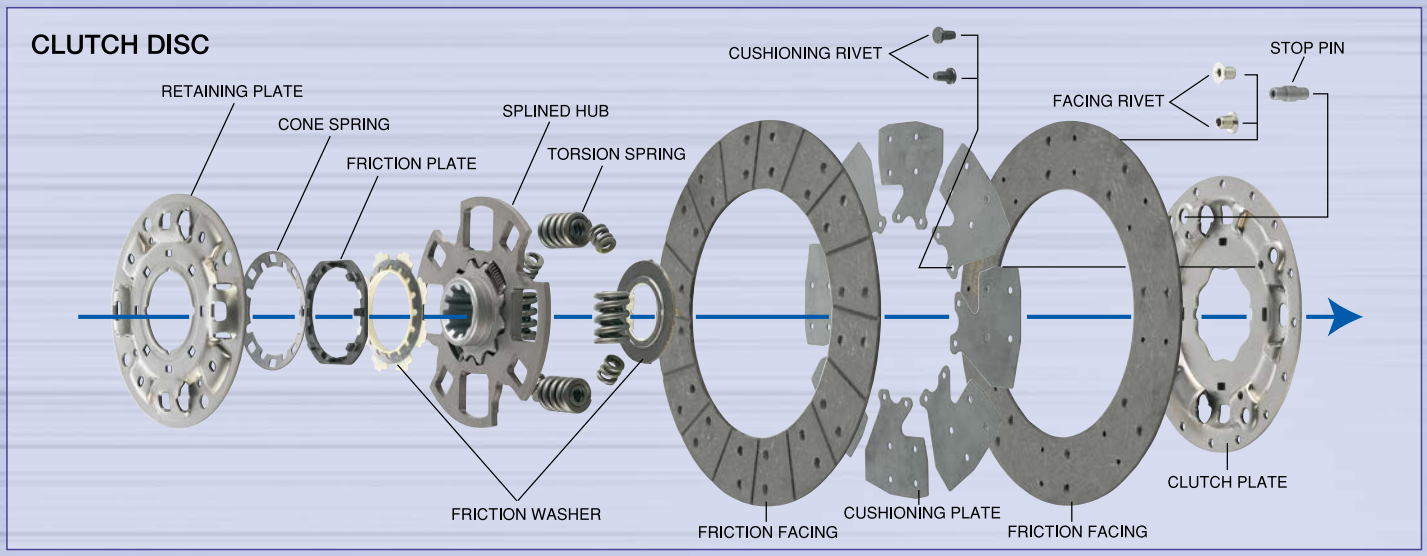

Transmitting the torque from engine smoothly

CLUTCH DISC

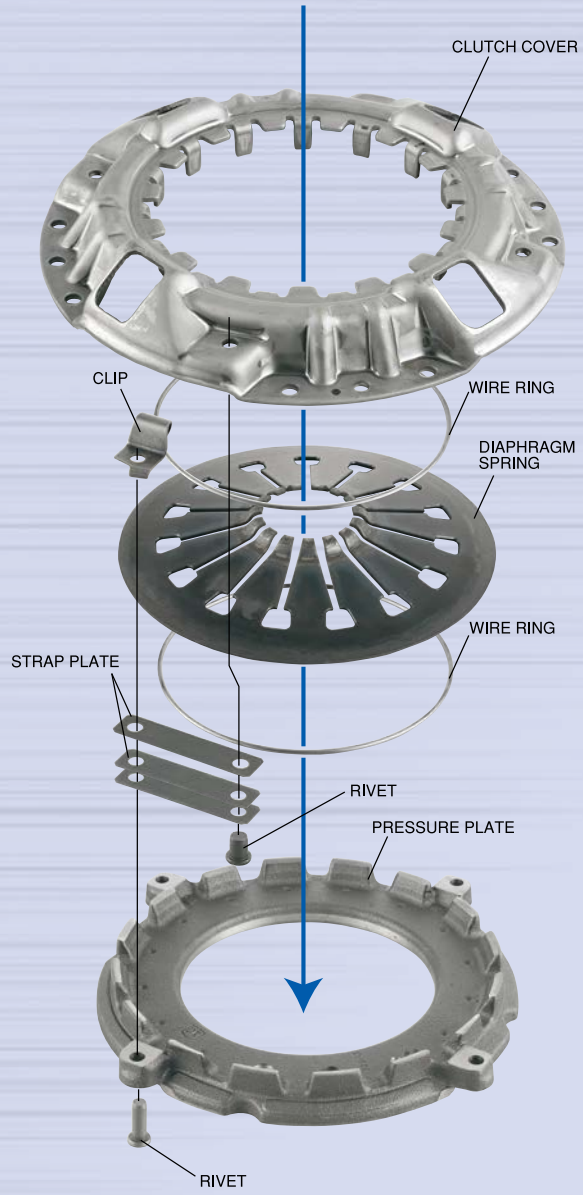

Engine torque can be cut off and transmitted by engaging or disengaging from the flywheel.

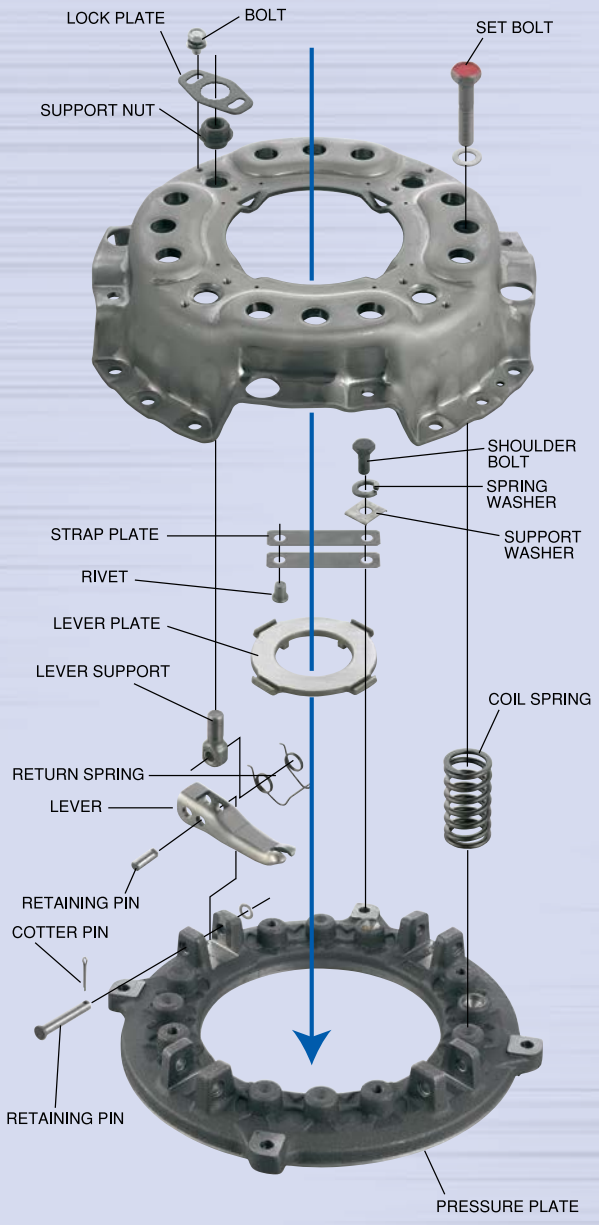

CLUTCH COVER

Clutch cover is to support clutch rotating system and transmit the engine torque by pushing clutch disc.

DIAPHRAGM SPRING TYPE CLUTCH COVER

COIL SPRING TYPE CLUTCH COVER

EXEDY Corporation

There are functionally 8 different types of clutch cover.

LB LEVER BOSS TYPE

Pressure plate and cover are directly clawed and fixed.

DT DIAPHRAGM TAG TYPE

Pressure plate and cover are fixed by strap plates.
Cover holds diaphragm spring.

LS LEVER STRAP TYPE

Pressure plate and cover are fixed by the strap plate.

PL PULL TYPE

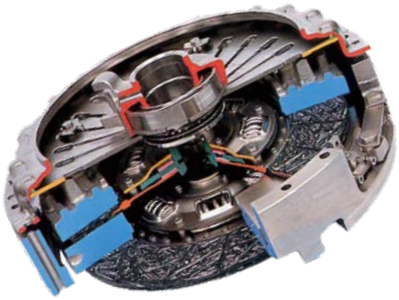

Release bearing is fixed on the edge of diaphragm spring and pull the release bearing.

DB DIAPHRAGM BOSS TYPE

Pressure plate and cover are directly clawed and fixed.

TW TWIN PLATE TYPE

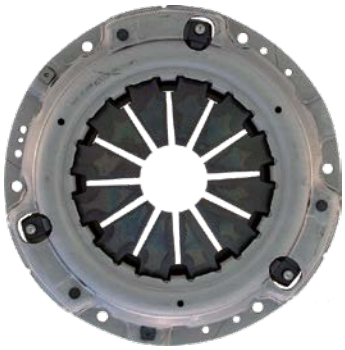

Two discs are used in one cover.

DS DIAPHRAGM STRAP TYPE

Pressure plate and cover are fixed by strap plates.
Diaphragm and cover are fixed by stud pins.

DU UNITY TYPE

Basically the similar design as DT and, specially designed to utilize common parts.

Classifications by friction materials

Organic Disc

Clutch disc assembly with asbestos free organic facing

Metal Disc

Clutch disc assembly with metalic facing

Combination Disc

Clutch disc assembly with combination of asbestos free organic facing and metalic facing

UF-EVO

Clutch disc assembly with newly developed facing. Please refer page20-21 for details.

Classifications by dampers

Solid Type

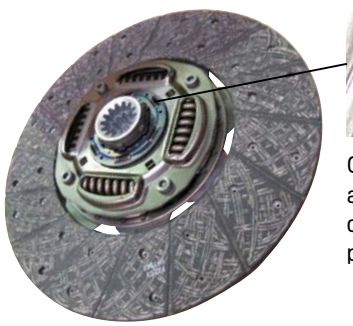

Clutch disc assembly without damper

Normal Type

Clutch disc assembly with damper

Silent Type

Clutch disc assembly with damper and pre-damper

WAD Type

Clutch disc assembly with Wide Angle Damper to absorb noise and vibration more efficiently

EXEDY Corporation

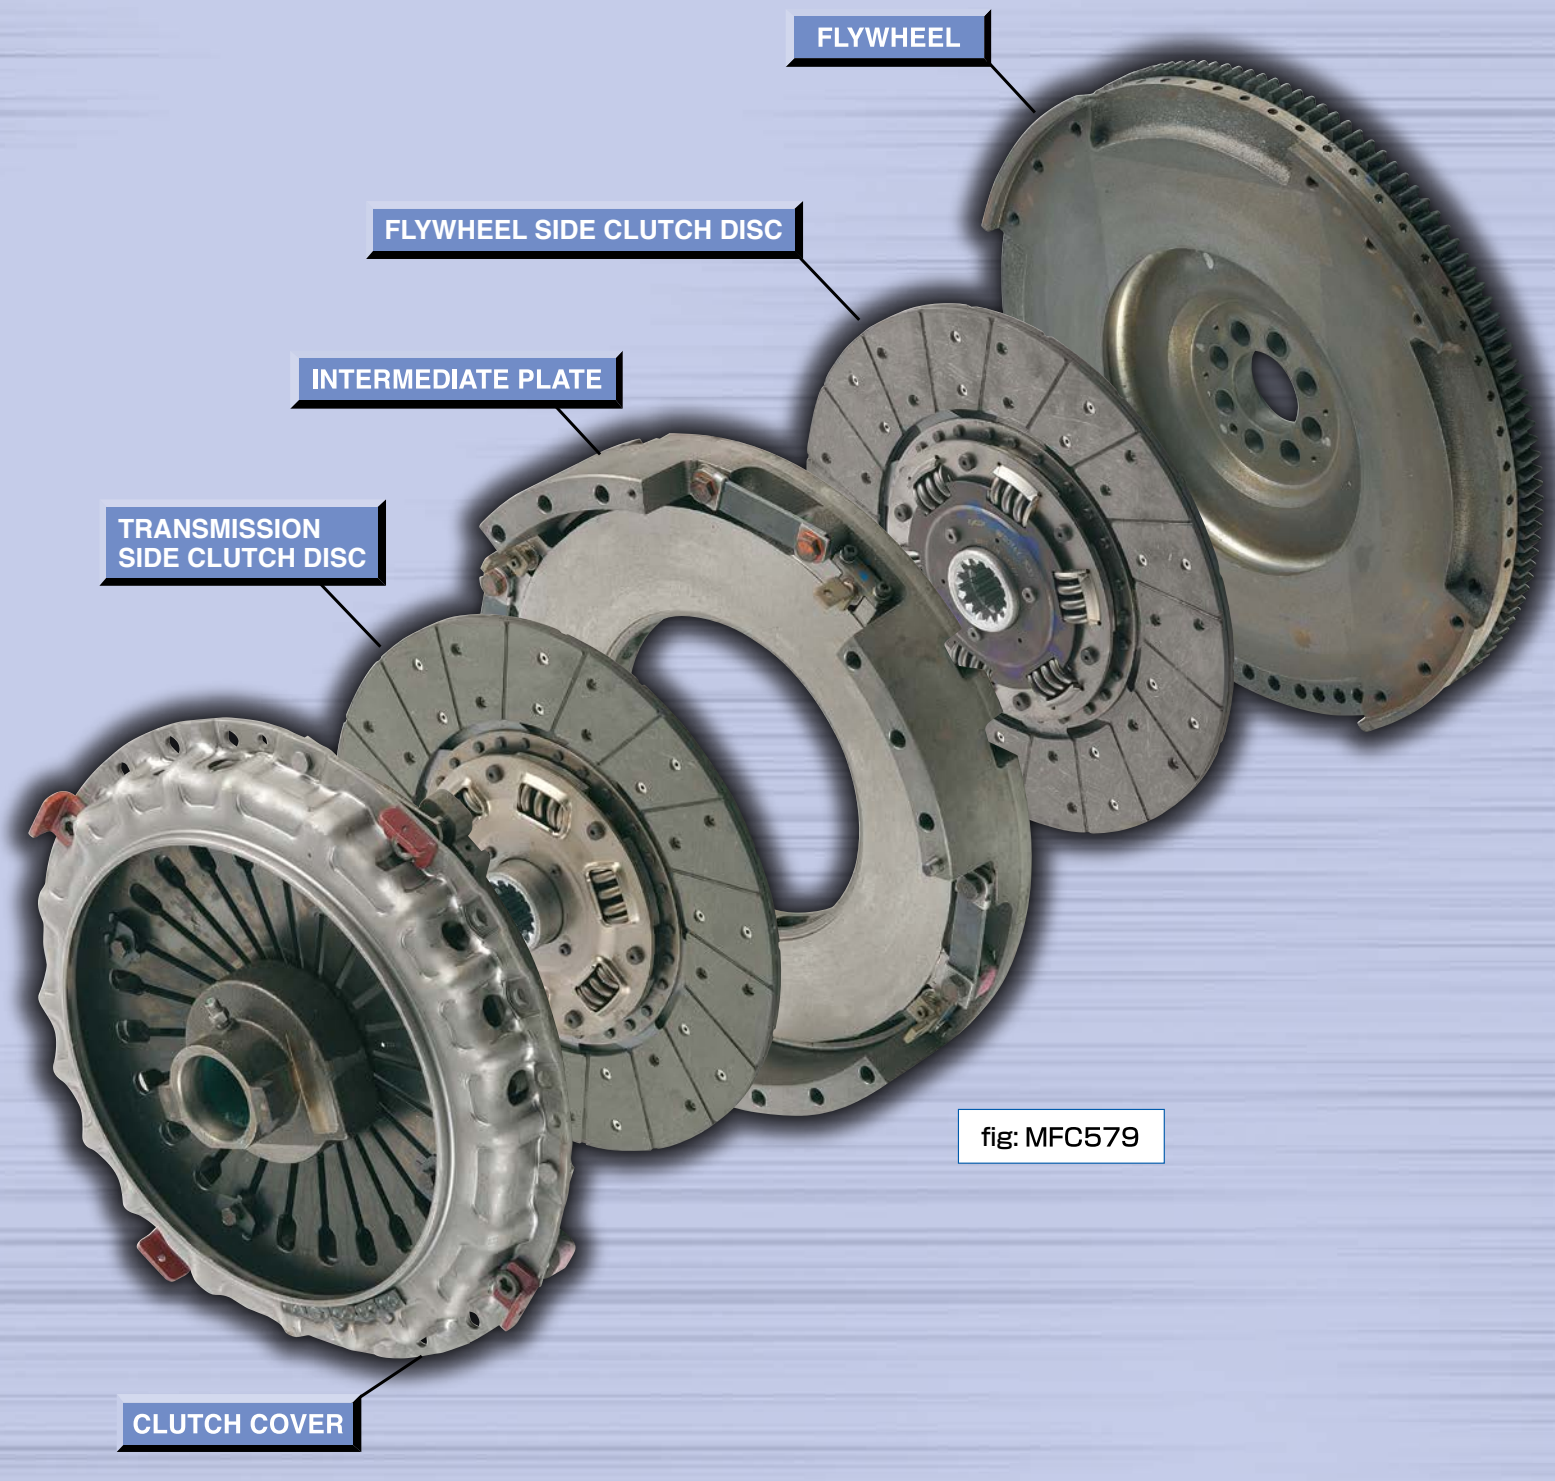

fig: MFC579

* An intermediate plate is included in each twin clutch set.

1. For the following list, one disc is included in each twin clutch set.

Maker	Size	Twin Clutch (with intermediate plate)	Transmission side disc		Flywheel side disc	
UD TRUCKS	380	**NDC504**	incl.	NDD017	NOT incl.	NDD017
	380	**NDC512**		NDD013		NDD011S
	380	**NDC521**		NDD003		NDD017

Attention : Please follow the guidelines below to prevent accidents or injuries.

Clutch Disc

1 Pre-assembly check

Prior to assembly, confirm fitment of the clutch disc on the main drive shaft.

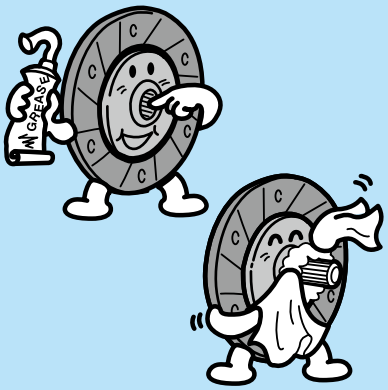

Why? It will help you to choose correct items.

2 Wipe away excessive grease

Apply a thin layer of grease on the splines of the disc. Wipe away protruding grease.

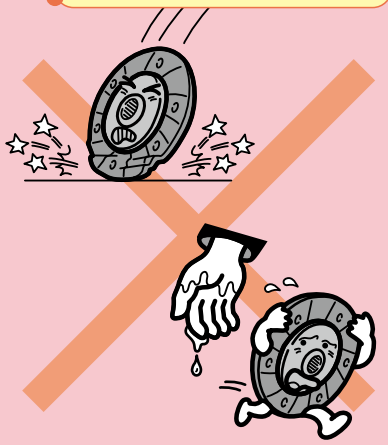

Why? Excessive grease can cause slippage and Judder.

3 Do not use dropped clutch discs

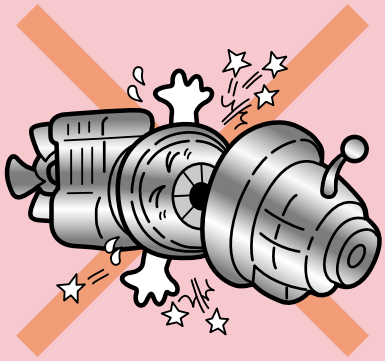

Make sure to wear clean gloves when you handle it.

Why? Using a dropped clutch disc causes gear engagement defects or judder.

4 Do not apply excessive force to insert the drive shaft

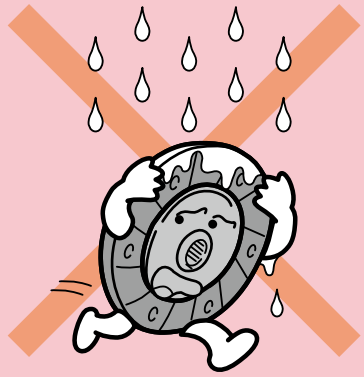

Why? Excessive force of insertion causes damages of the gear teeth, and which causes gear engagement defects.

5 Do not use wet parts

Please do not use wet parts.

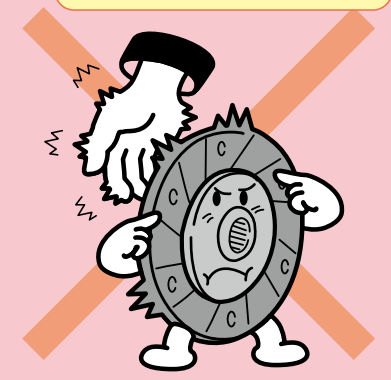

Why? Using wet parts causes gear engagement defects or judder.

6 Do not handle with bare hands

Wear protective gloves when handling clutch discs.

Why? The facings include glass fibers make your skin irritate if you touch it directly by hands.

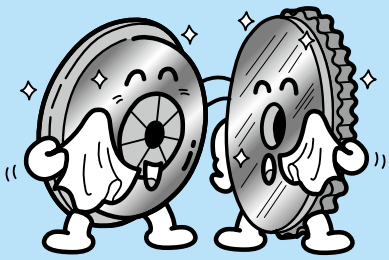

Attention : Please follow the guidelines below to prevent accidents or injuries.

Clutch Cover

1 Wipe the friction surface

Wipe up the pressure plate surface of the clutch cover with a clean cloth to remove oil.

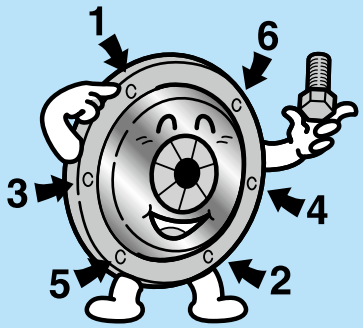

Why? If oil adheres to these surfaces, it can cause gear engagement defects or judder.

2 Fasten bolts diagonally

When attaching the clutch cover, tighten the bolts in a diametrical pattern.

Why? By tightening the bolts gradually and in a diametrical pattern, the cover will install evenly and prevent lever and gear engagement defects.

3 Do not use dropped clutch covers

Make sure to wear clean gloves when you handle it.

Why? Using a dropped/ contaminated clutch cover causes gear engagement defects or judder.

4 Do not use wet parts

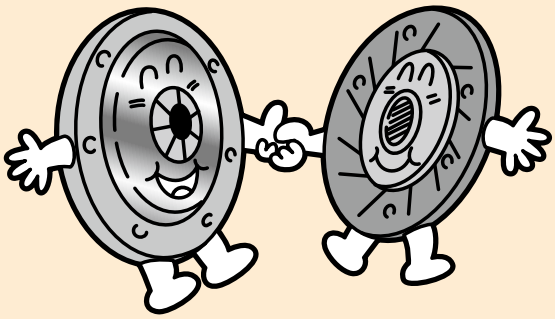

Please do not use wet parts.

Why? Rusting can cause gear engagemant defects or judder.

We recommend replacing cover and disc together as a set

Why? The clutch may have damages or invisible worn parts. Therefore, please replace the clutch disc and cover as a set to avoid unexpected problems.

Do not use our clutch cover or disc together with rebuilt items.

Why? It may cause a trouble if the clutch is combined with rebuilt parts.Combine our clutch cover/disc together with genuine or EXEDY cover/disc.

EXEDY Corporation

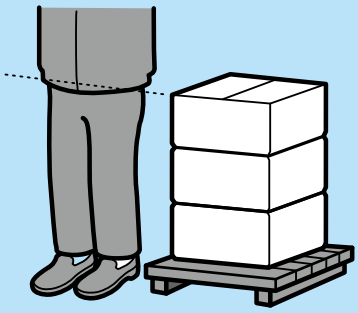

Attention：Please follow the guidelines below to prevent accidents or injuries.

Handling of Products in External Packaging Boxes and Product Boxes

1 Stack only as high as your waist

Please do not stack external packaging boxes higher than your waist.

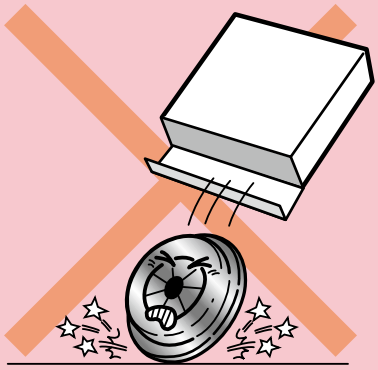

Why? Falling boxes could cause injury or product defects.

2 Beware of dropping

Carefully handle boxed products so the parts do not fall out.

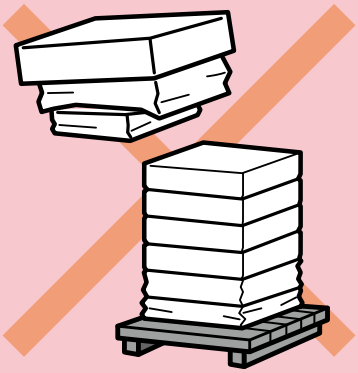

Why? If a product slips out of its product box and drops to the ground, it could cause an injury.

3 Do not stack product boxes too high

Do not stack product boxes higher than five. Stack smaller boxes on top of larger boxes.

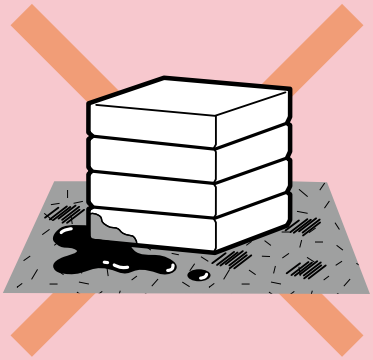

Why? Stacking product too high can damage the products and lead to product defects.

4 Do not place directly on the floor

Please do not stack product boxes directly on the floor.

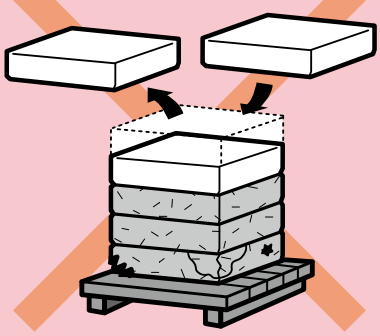

Why? Floor stacking can cause product damages and rusting.

5 Do not use newest products first

Please observe the first-in-first-out principle.

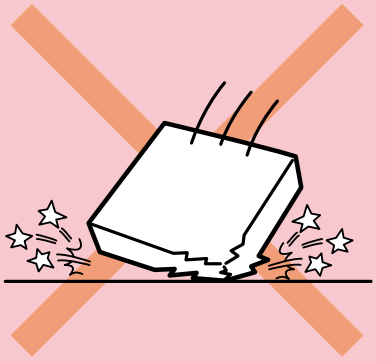

Why? Storage for long periods can cause products to rust.

6 Do not handle roughly

Please do not handle boxes roughly when transporting them.

Why? Rough handling can damage the boxes and the products which can cause product defects.

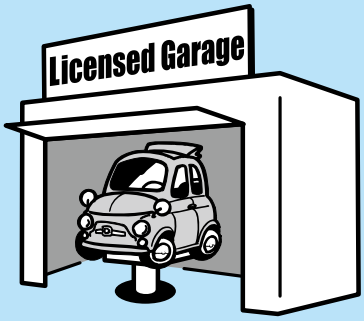

Attention : The items in this parts list will be used at high revolution.
Please follow the guidelines below or serious injury may occur.

Others

1 Ask a licensed mechanic

Have clutch replacement serviced by a licensed mechanic using the manufacturer specifications.

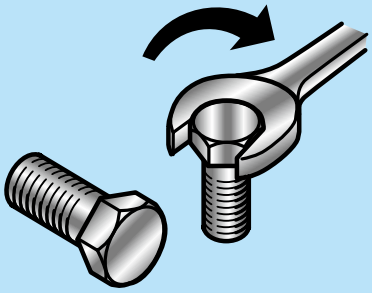

Why? Defective repair work can lead to breakdowns and accidents.

2 Use the specified bolts at the specified torque

Exedy clutch covers and flywheels use manufactured specified bolts, so please refer to the manufacturer maintenance guidelines for installation.

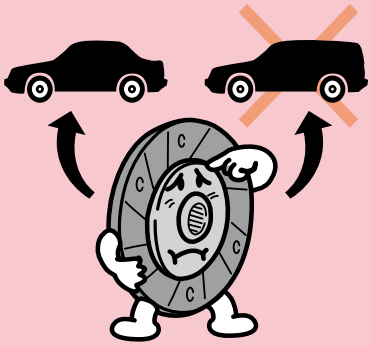

Why? The breaking of bolts or insufficient bolt torque may cause bolts to fall out.

3 Do not use against instructions

Use the product that is developed for the specific application and model.

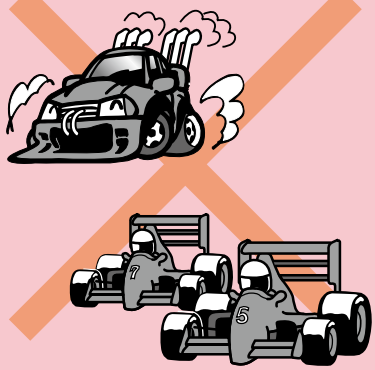

Why? Using Exedy parts in non-compatible vehicles could cause a wide variety of complaints.

4 Do not use Exedy products on racing vehicles

Please do not use Exedy products on remodeled cars. Please use the sports clutch for car race or tournament.

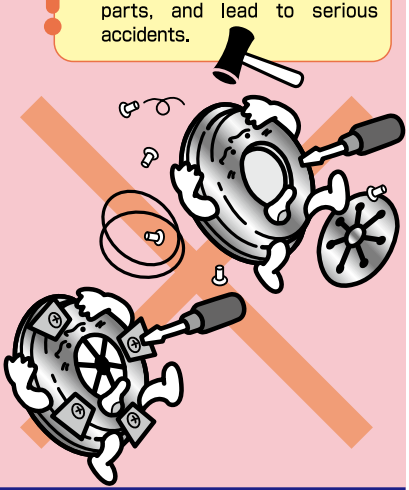

Why? Remodeling for high power and installation of high-output engines in particular can cause clutch damage and lead to serious accidents.

5 Do not remodel parts

Please do not dismantle or remodel Exedy parts.

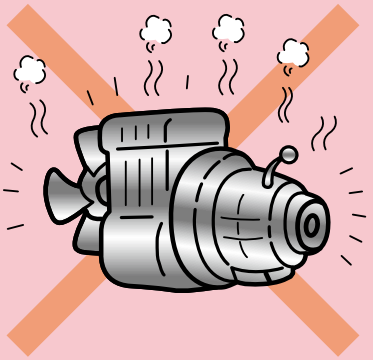

Why? Dismantling and remodeling can cause defects and breakage of parts, and lead to serious accidents.

6 Beware of high temperatures

Be sure to work on the vehicle once the components have cooled down to normal temperatures.

Why? Working on hot machinery can cause work accidents such as burns.

Introduction

Purpose of this guide

When experiencing clutch problems, it is not uncommon for the transmission to be removed and replacement clutch installed clutch before understanding why the clutch had failed. This may help in the short term, however without diagnosing the cause of the problem, this may result in similar repeated failures. EXEDY have developed the following Fault Finding guide to avoid further mechanical labor costs and unnecessary time spent with the vehicle off road.

Please refer this catalog whenever you experience clutch problems.

How to use this Fault Finding guide

1. **Confirm the following symptoms being experienced (Why was the clutch removed?)**
   - **Slipping Clutch**
   - **Clutch Judder**
   - **Cannot Select Gears (Clutch Non-Release)**
   - **Noisy**
   - **Pedal/Other**

2. **Identify and understand the cause of failure using information contained in this guide**
3. **Rectify any associated faults prior to new clutch installation**

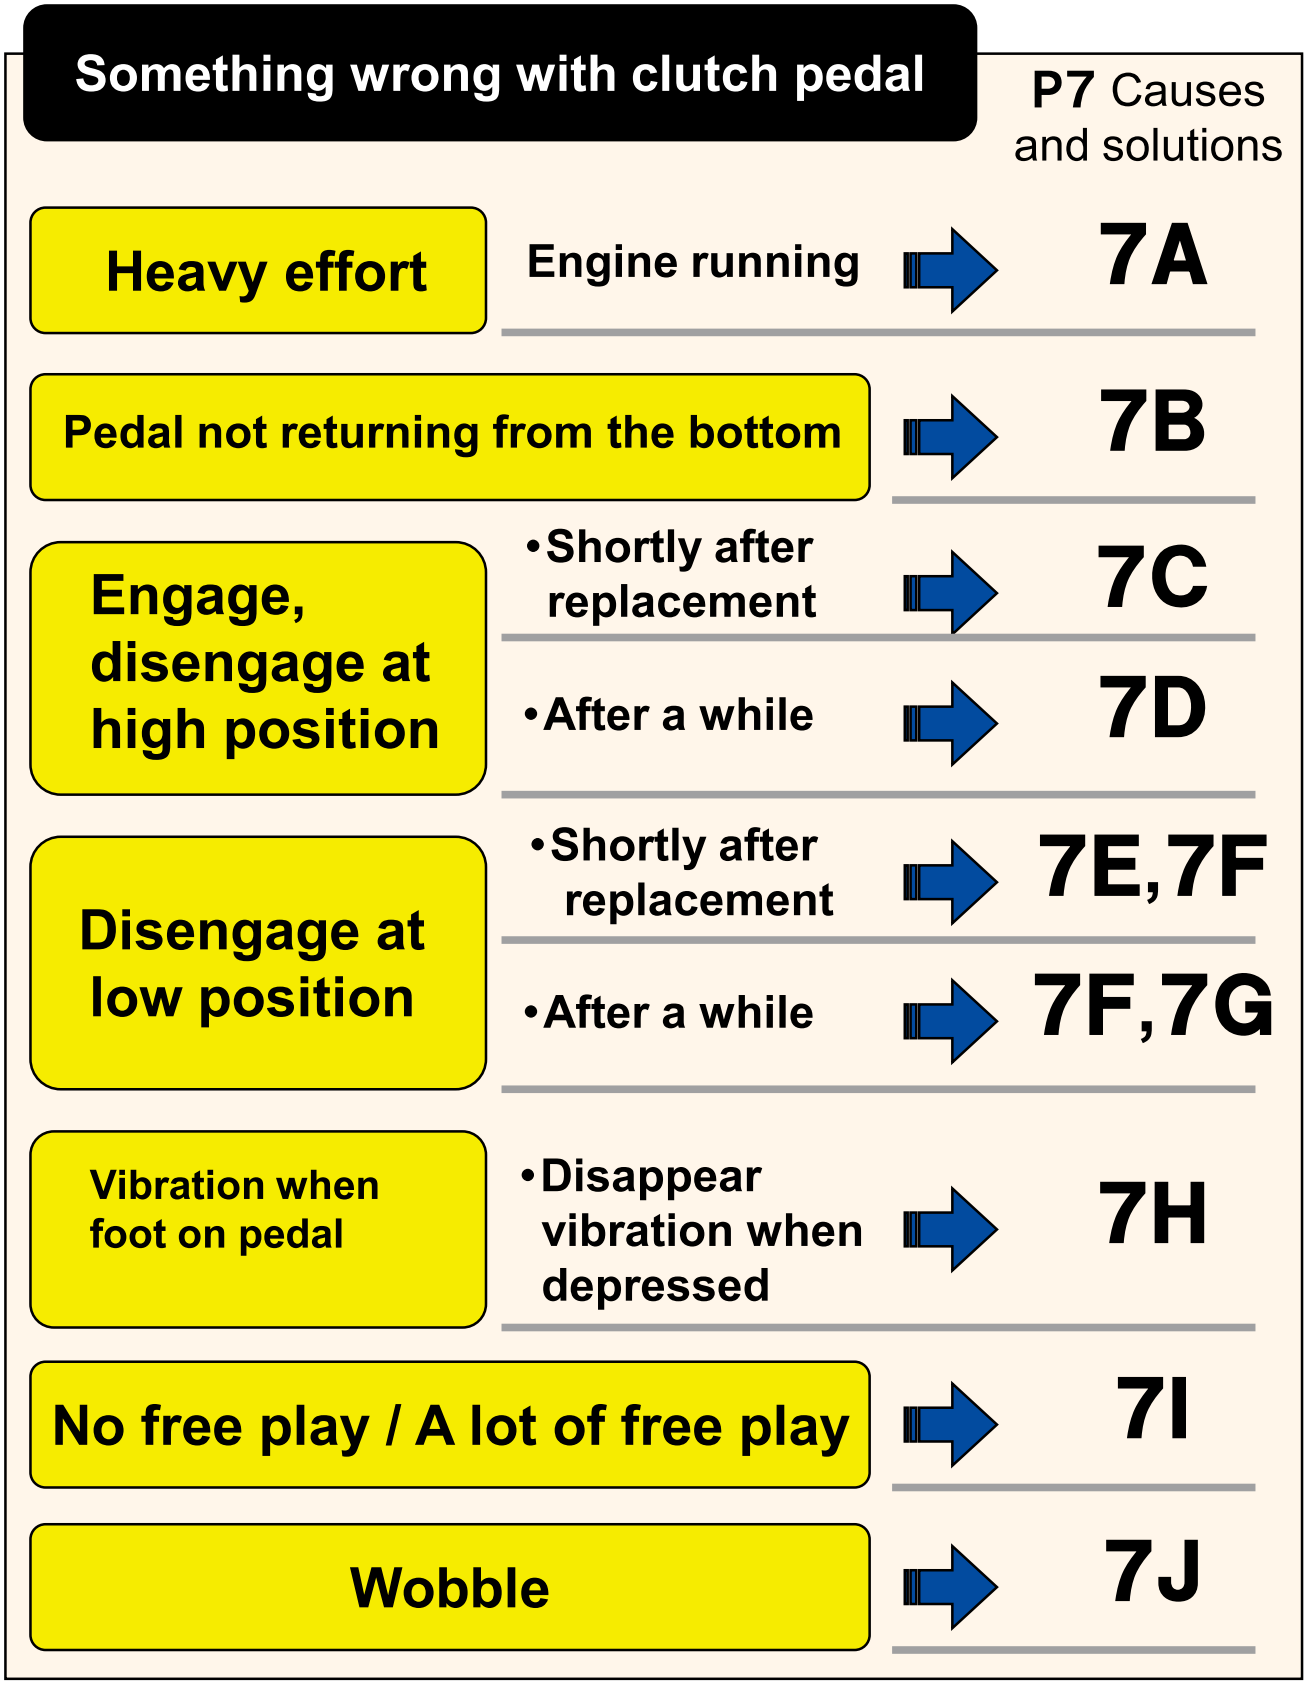

Check before replacing

Noise (Driveable)

P5 Causes and Solutions

Idling	•When clutch pedal is NOT depressed	5A,5B,5C,5E
	•When clutch pedal is depressed	5C,5D,5F
Starting	•Engagement •Open throttle (Acceleration)	5G
	•Engagement	5H
Driving	•Acceleration, Deceleration	5I
Others	•When clutch pedal is NOT depressed	5J

Check before replacing

Check before replacing

Something wrong with gear shift lever

P9 Causes and Solutions

Unable to shift	• Before engine start	9A
	• Whilst engine running	9B
Heavy gear shift effort		9B
Rasping sound during operation	• Noise on all gears • Noise on reverse gear	9B
	• Noise on particular gear	9C
Vibration on shift lever		9D

Unable to drive

P9 Causes and solutions

No acceleration Slow down	• Burning smell	9E
Whip back and force harsh engagement	• Shortly after replacement	9F
	• After a while	9G
No drive in gear	• Noisy clutch	9H
Movement with depressing clutch pedal	• Heavy effort	9I

Causes and solutions (Noisy clutch)

Check before replacing the clutch

No improvement

5 A	• Confirm if noise disappears when the Clutch pedal is depressed. If the noise disappears when clutch pedal depressed, this is an idle gear rattle due to use of non specified, low viscosity oil. →Exchange with specified transmission oil. •In case of being backlash or looseness in control system→check installation
5 B	•Abnormal idling RPM. Heavy vibration and rumblings. →Jack up engine and adjust to the normal idle speed.
5 C	• Non removal of hold down bolts (hold down bolt type only) → Check if the Clutch Cover has red coloured painted bolts through inspection hole. •Parts are damaged by excessive force during clutch replacement. →Check parts after removing transmission.
5 D	•Interference between clutch disc and clutch cover due to over stroke. →Adjust clutch pedal free play.
5 E	• Reconfirm whether the noise comes from the Clutch •Abnormal bearing on transmission. →Check bearing after removal of transmission.
5 F	•Malfunction of release bearing or pilot bearing. → Check if Release Bearing was replaced with new one during Clutch replacement.
5 G	•Interfering noise by jolting of driveline under driving torque. → Check the drivetrain, and engine mount installations for any signs of breakage and cracking.
5 H	•Does release control system operate smoothly? →Inspect clutch booster itself, grease up at movable part. •Check wear condition of clutch disc. →Check wear condition through inspection hole or release fork area.
5 I	•Driving gear rattle due to unspecified low viscosity of oil. →Exchange specified transmission oil. •Backlash or looseness on control system causes noise→Check installation.
5 J	•Grease up at movable part of clutch pedal, release fork and lever. •Inspect clutch booster. →In case of failure of clutch booster, repair according to the service manual.

· In case of a failure without known cause, please apply a request that there be an investigation based on warranty certificate. Followings, however, are not eligible.
1. Failure by wear or aging variation.
2. 90 days or 3,000miles under normal driving condition after installation.

Check after removing transmission

•Check clutch compatibility.→Replace with suitable clutch, if not compatible.
•Check backlash or free play at the movable part of release fork.→Adjust or repair according to service manual.
•Check wear on main drive shaft and spline hub.
→Worn out parts shall be replaced with new one. (Refer to P12-No.3)
•Check damage on clutch cover or clutch disc.
→Clutch may have failed if excessive force has been applied during installation.
(Refer to P12-No.3,P14-No.7,P18-No.5)

•Removal of hold down bolts. →Failed parts shall be replaced with new one.
(Refer to P19-No.9)
•Failed parts shall be replaced with new one.
→Clutch may be failed if excessive force has been applied during installation.
(Refer to P12-No3,P14-No7,P18-No5)

•Check whether there is an interference mark on clutch cover and clutch disc.
→Failed parts shall be replaced with new one. (Refer to P18-No3)

•Check bearing on transmission side whether there is backlash.
→Repair according to service manual.

•Check damage and direction of a release bearing.→Replace with new one, if damaged.
(Refer to P18-No5)
•Check backlash on a pilot bearing. →Replace with new one, if failed. (Refer to P23-No4)

•Check tightness of flywheel bolts/ clutch cover bolts. →Replace with new one, if damaged.

•Check whether diaphragm finger tips were even.
→Remove clutch cover, then reinstall same cover and tighten bolts. When you install the clutch cover, tighten bolts temporary by hand, then torque down in correct diagonal sequence one by one.
(Refer to P17-No2)
•Check whether grease flew out on a clutch disc.
→No adequate friction or noise. Replace with new clutch disc. (Refer to P13-No5)

•Reconfirm compatibility. →Replace with adequate clutch, if not compatible.
•Check whether grease flew out on a clutch disc. Replace with new one, if greased.
→Deteriorate function of noise control and vibration control resulted in noise. Replace with new clutch disc, if greased. (Refer to P13-No5)
•Check backlash or free play at the joint of release fork. →Adjust to manufacturer's specification.

•Inspect slide portion at release bearing/ fork. Grease up.

•Replace with new parts, if damaged. (Refer to P22-No2)

Causes and solutions (Abnormal on clutch pedal)

Check before replacing a clutch

No improvement

7 A	•Is a clutch booster normal? →Inspection according to service manual. •Does control system operate smoothly? →Adjust or grease up.
7 B	•Is the clutch pedal height or free play appropriate? →Adjust pedal free play and rod projecting amount according to a service manual. •Is a piston firmly fixed to a release cylinder? •Is there any oil leakage from release cylinder, master cylinder or clutch pipe line? →In case of leakage, overhaul and repair. •Is there air in clutch line? → work out air-bleeding.
7 C	•Is the clutch pedal height or pedal free play appropriate? →Adjust pedal free play and rod projection amount according to a service manual. •Check whether the release cylinder operates properly..
7 D	•Is the clutch pedal height and free play adequate? If you reduce pedal free play excessively, the release bearing does not return and it may result in a change of engagement point in use. →Adjust pedal free play and rod projection amount to manufacturer's specification. •Does a driver have a habit to drive with his foot on a clutch pedal or to use semi-disengagement frequently? →Check wear condition on a release fork through inspection hole. There is a possibility to wear clutch disc prematurely.
7 E	•Is the clutch pedal height or free play appropriate? →Adjust pedal free play or rod projecting amount according to a service manual →Check release cylinder whether it operates properly.
7 F	•Check oil leakage from a release cylinder, master cylinder and clutch line. →In case of leakage, overhaul or repair it according to a service manual. •Is there air in clutch fluid line? →**Bleed hydraulic system**. •Is there any failure on a release fork such as deformation? →Remove a transmission and replace it.
7 G	•Does a driver have a habit to drive with his foot on a clutch pedal or to use semi-disengagement frequently? Components will be over heated and distorted. It results in difficult to disengage gear. →Overhaul according to a service manual.
7 H	•Shortly after replacement the position of a release bearing is unstable and results in vibration. →Depress clutch pedal a couple of times to fit.
7 I	•Is the clutch pedal height and free play adequate? →Adjust the pedal height and free play to manufacturer's specification.
7 J	•Check looseness of pedal installation, and adjust free play. →Replace with new one, if failed.

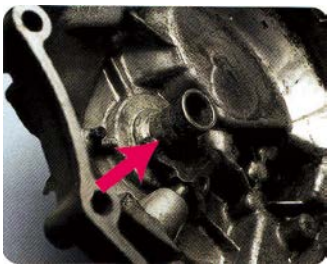

· In the case of failure without a known cause, please submit the official EXEDY Warranty Claim form with full details, and request further EXEDY Technical investigation. The following circumstances however, are not eligible for consideration under the EXEDY Warranty
1. Failure by wear or aging variation.
2. 90 days or 3,000miles under normal driving condition after installation.

Check after removing transmission

•Inspect slide portion at a release bearing/fork, a transmission retainer, etc. Grease up.
→Replace damaged parts, if failed at slide portion.
Grease up periodically, if fixed intervals is specified by manufacturer. (Refer to P22-No2)

•Check failure of release bearing, or direction of it.
→Replace with new parts, if failed. (Refer to P18-5)

•Check compatibility of clutch cover.
If you use unspecified clutch, clutch pedal effort becomes heavier or clutch pedal does not return from the bottom.

•Check oil leakage from CSC, Concentrated Slave Cylinder, or smooth movement.
→Replace with new components, if failed. (Refer to P22-No1)

•Check wear or failure on the clutch cover and the clutch disc.
→Replace with new components, if failed any.
Educate a driver not to put his foot on a clutch pedal during driving. (Refer to P20-No10)

•Check distortion on the clutch disc or cover. →Replace with new if distorted.
(Refer to P11-No1、P12-No4、P17-No1・2)
•Check the backlash on a release fork/ lever. →Adjust or repair according to a service manual.
•In case of lever type clutch cover, is it used with lever height adjustment?
→It is not necessary to adjust lever height, because it is adjusted properly. Adjust it by release control system.

•Inspect deformation and excessive wear condition of release fork and pivot etc.
→Replace with new components, if damaged.
(Refer to P11-No2、P12-No3、P17-No1、P18-No4・5、P22-No1、P23-No4)

•Frequent usage of semi-disengagement makes a clutch disc distort, and results in a change of disengagement point. →Replace with new one, if damaged.
Educate a driver not to drive with his foot on a clutch pedal or not to use it in semi-disengagement frequently.
(Refer to P19-No8)

•Check whether diaphragm fingers or levers are uneven.
→Remove clutch cover, then reinstall same one and tighten bolts.
When you install the clutch cover, tighten bolts temporary by hand, then torque down in correct diagonal sequence one by one.（Refer to P17-No2）

Causes and solutions (Shifting & Driving)

Check before replacing a clutch

No improvement

9 A	•Is there any problem with installation of clutch cable? →Check installation of shift control system.
9 B	•Possible difficult to disengage gears. Is the pedal height or free play adequate? →Adjust the pedal free play and rod projecting amount according to a service manual. →Check the return of piston of release cylinder. •Is there any problem with installation of clutch cable? →Check installation of shift control system.
9 C	•Failure of transmission, if it is a particular gear. (except reverse gear) →Check a transmission.
9 D	•Is there any problem with installation of clutch cable? →Check the backlash of shift control system.
9 E	•Is the pedal height or free play adequate? →Adjust the pedal free play and rod projecting amount according to a service manual. →Check the return of piston of release cylinder. •Remove hold down bolts. (Hold down bolts type only) →Check the red painted hold down bolts through inspection hole.
9 F	•Does a clutch pedal operate smoothly? →Check a release fork and lever whether they operate smoothly.
9 G	•Interference noise by driveline under heavy load. →Check breakage, cracks, installation of engine/transmission mount, also check the backlash on a drive train.
9 H	•Remove hold down bolts. (Hold down bolts type only) →Check the red painted hold down bolts through inspection hole. •Check the installation of shift rod and wiring, also smooth movement of a release fork and lever.
9 I	•Is the clutch pedal height and free play adequate? →Adjust it according to a service manual. •Check oil leakage from a release cylinder, master cylinder and clutch line. →Overhaul or repair according to a service manual.

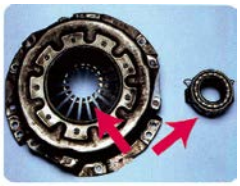

· **In case of a failure without known cause, please apply a request that there be an investigation based on warranty certificate. Followings, however, are not eligible.**
1. Failure by wear or aging variation.
2. 90 days or 3,000miles under normal driving condition after installation.

Check after removing transmission

•Check the backlash on a release fork and lever.

•Check the failure and direction on a release bearing. (Refer to P18-No5)
•Check scratches on spline hub. (Refer to P11-No1・2)
•Check whether pilot bearing rotate freely. (Refer to P23-No4)
→Always replace with new components, if failed.

•Check oil leakage or smooth movement on CSC, Concentrated Slave Cylinder.
→Always replace with new components, if failed. (Refer to P22-No1)

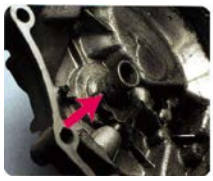

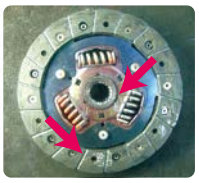

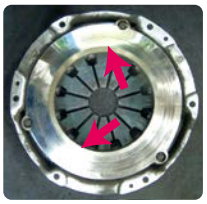

•Remove a clutch and replace with new parts, if failed.
Check a release bearing, a pilot bearing, a release fork and a pivot, when you replace a clutch.
Pedal height and free play shall be adjusted, and hold down bolts and set wire shall be removed as well.
(Refer to P13-No6,P14-No7、P18-No4,P19-No6・7・8・9,P23-No3)

•Inspect slide portion at release bearing/release fork.
→Grease up（Refer to P22-No2）
•Check oil or grease on a clutch disc.
→Replace with new clutch disc, if contaminated with oil or grease.
(Refer to P13-No5,P19-No6)

•Check a pressure plate whether it is shiny ground friction surface.
→If a driver put his foot on a clutch pedal during driving, the clutch performance is deteriorated and results in bad semi-disengagement performance.
(Refer to P20-No10)

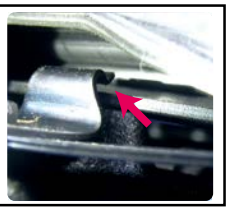

•Remove the hold down bolts or set wiring.
→Replace it, if failed.
(Refer to P13-No6,P14-No7,P18-No9,P20-No11)

•Inspect slide portion on a release bearing/ fork. Grease up.
(Refer to P22-No1・2)

•Check the deformation of strap plate and clip, broken parts between gap as well.
→Replace it, if failed. (Refer to P12-No3、P17-No1)

•Check the backlash on a release fork/ lever
→Adjust or repair it according to a service manual.

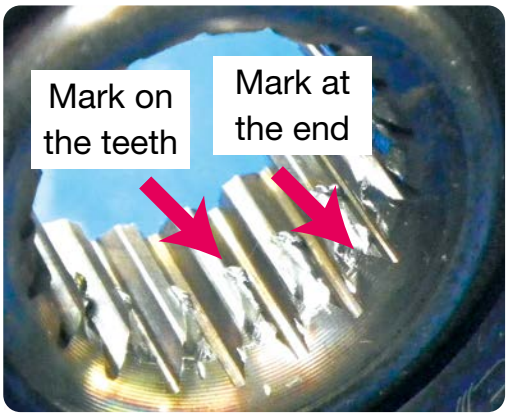

Malfunction of clutch discs

1.Difficult to disengage gears

Problem:
Contact mark on the teeth of spline and the end of hub

Cause:
Excessive force to fit a main drive shaft causes this problem during reinstallation of transmission.

Solution:
During the installation of transmission, align drive line;
-height
-angle
-spline teeth
then fit without excessive force.

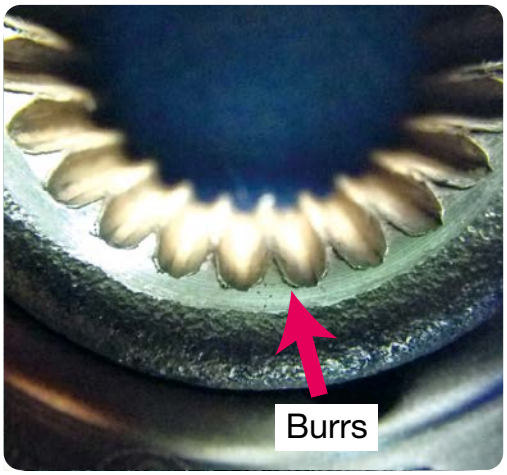

Hitting mark

2.Difficult to disengage gears

Problem:
Burrs at the end of hub due to uneven wear on the spline teeth

Cause:
Misalignment between engine crank shaft and transmission main driveshaft causes this problem during installation of transmission.

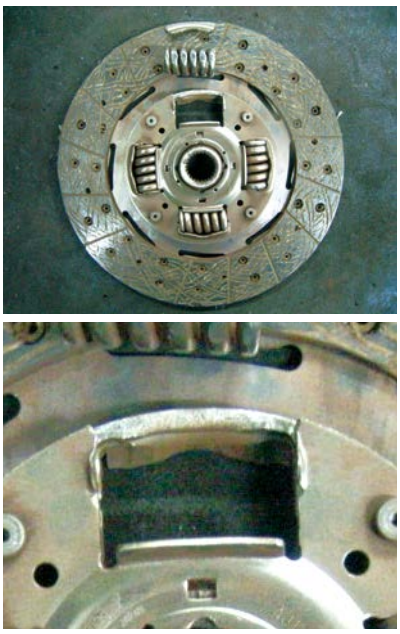

Solution:
1) Replace deteriorated pilot bearing or bush.
2) Reinstall parts after removal of contamination or scratch on the mating surface of bell housing.

Burrs on hub

3.Unable to disengage gears / Noisy clutch

Problem: Damaged torsion springs

Damaged torsion spring

Cause:

1) When engine torque is higher than clutch torque, this misapplication causes springs to deteriorate.
2) Misalignment between engine crank shaft and transmission main drive shaft causes this problem during installation of transmission.

Solution:

1) Choose and fit appropriate EXEDY clutch to suit the application.
2) Reinstall deteriorated pilot bearing or bush parts after removal of contamination or scratch on the mating surface of bell housing.

4.Difficult to disengage gears

Problem: Damaged facing material

Cracks on friction facing

Cause:

Clutch disc has been dropped possibly during installation or damaged in transit. Bulged clutch facing to contact flywheel causes this problem.

Solution:

Always check before installation that is intact.
Treat parts carefully.

Malfunction of clutch discs

5.Slipping clutch/shuddering/juddering clutch

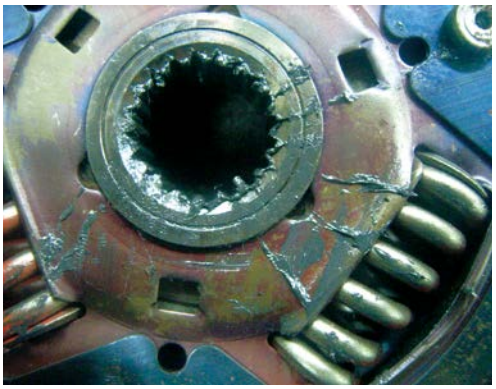

Problem: Oily facings

Cause:
Excessive grease or low viscosity grease causes this problem.

Melted grease on friction material affected co-efficient of disc facing.

Solution:
Lightly grease spline, wipe off excessive grease after tentative installation and ensure there is smooth sliding of clutch disc on main drive shaft.

Use grade of grease specified by vehicle manufacturer.

Fly apart excessive grease

6.Slipping clutch/Shudder/Judder/Noisy clutch unable to drive

Problem: Broken facings

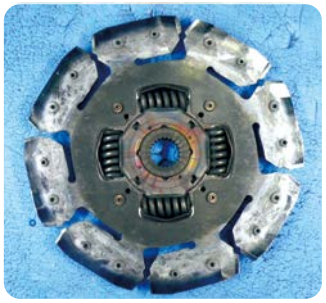

Cause:
Following factors lead to high temperature of friction surface, resulting in this problem.

1) Driving with a foot on a clutch pedal
2) Overloading vehicle
3) improper starting gear
4) Clutch pedal height or free play maladjustment

Solution:
1) ~ 3) Driver education
4) Adjust pedal free play according to service manual

Partial failure of facing

Overall failure of facing

7.Noisy clutch/unable to drive

Problem: Wear out on teeth of spline

Problem: Cushion spring steel segments separated from hub area

Wear out on teeth

Cause:

Misalignment between engine crank shaft and transmission main drive shaft during installation of transmission.

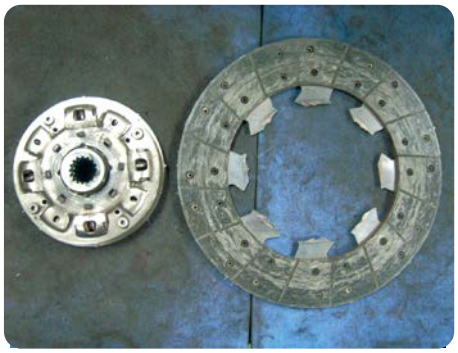

Excessive force to fit main drive shaft causes this problem during reinstallation of transmission.

Solution:

During the installation of transmission, align drive line,
-height
-angle
-spline teeth

then fit without excessive force.

Exchange the deteriorated pilot bearing or bush parts after removal of contamination or scratch on the mating surface of bell housing.

Separated clutch disc assembly

8. Difficult to diengage gears

Problem:

Rust on the teeth of spline hub

Cause:

No or insufficient grease on the teeth of spline hub
Or grease is vanished under elevated temperature due to the use of low heat-resistance grease.

Because of the rust, the disc does not move on the main drive shaft smoothly.
Then the clutch disc is not disengaged fully from the friction surface.

Solution:

Apply greace with high heat-resistance to the spline of both main drive shaft and clutch disc assy.
Insert the disc to the shaft temporarily, and wipe out the excess greace.

Insufficient grease leads to the rust on the spline

9. Unable to install the clutch

Problem:

Unable to install the clutch disc to the main drive shaft

Cause:

- Spline specification is different from main drive shaft form.
- Clutch disc is not matched to the car. Not checked carefully before installation

Solution:

- Check carefully with this catalogue for getting right part number.
- Insert the disc to the shaft temporarily and check if it moves smoothly on the shaft.

Spline specification is not matched

10. Noisy clutch/difficult to disengage the clutch

Problem:

Dropout of torsion spring/wear out of stop pin

Cause:

1) Misalignment
2) Inappropriate driving
   (Frequent use of shift down when the clutch gets to high rotation)
3) Use with high torque engine

Solution:

1) Be careful to do appropriate driving
2) In case of sports car with high torque engine, we recommend to use our sports clutch.

Wear out on stop pin

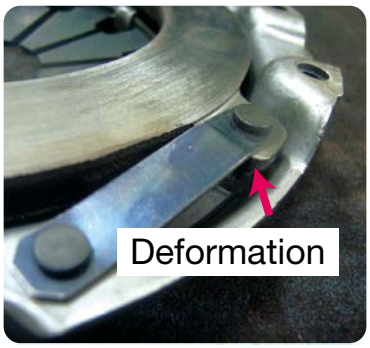

EXEDY recommends complete Clutch Kit replacement.

Malfunction of clutch covers

1.Difficult to disengage gears

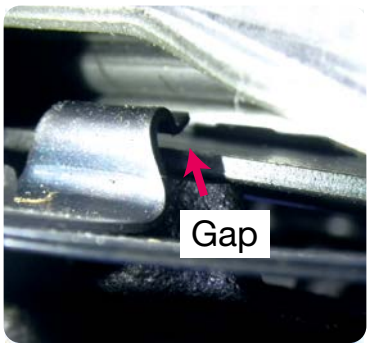

Problem:
Distorted retractor leaf spring
Faulty with gap above diaphragm spring

Bent drive straps

Cause:

Clutch cover pressure plate assembly has been dropped during installation or transit causing stretched and damaged retractor clips. No gear selection or difficult engagement due to the reduced pressure plate lift

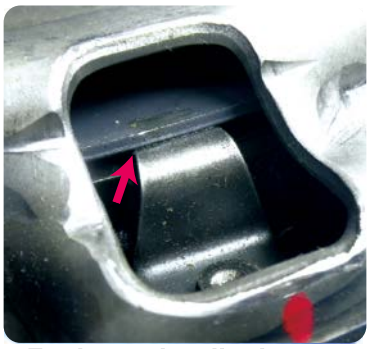

Faulty with gap above diaphragm

Problem:
Faulty under diaphragm spring

Cause:

Clutch cover pressure plate assembly has been dropped during installation or transit causing damaged retractor clips. The pressure plate does not move properly, when you depress the clutch pedal.

Faulty under diaphragm

Solution:

Replace with a new cover assembly. Never use the dropped clutch.

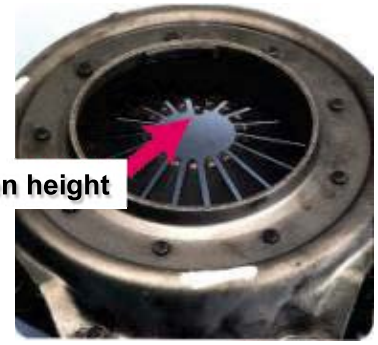

A clutch is a precision component, treat in a careful manner.

2.Clutch drag / Judder / Noisy clutch

Problem:
Clutch diaphragm fingers or levers are uneven

Cause:

The pressure plate cover assembly was torqued down incorrectly i.e. not diagonally.

Uneven diaphragm tips

Solution:

Tighten bolts temporary by hand, then torque down in correct diagonal sequence one by one.

3.Difficult to engage/disengage gear, Noisy clutch

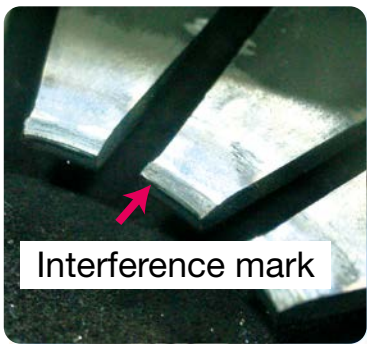

Problem: Diaphragm fouled on clutch disc c

Cause:

1) Interference due to release bearing over stroke.
2) An incorrect clutch disc may interfere with diaphragm, when you depress the clutch pedal.

Solution:

1) Refer to clutch adjustment procedure, and adjust pedal free play.
2) Use the correct clutch disc.

Interference

4.Difficult to disengage gear/ Slipping clutch

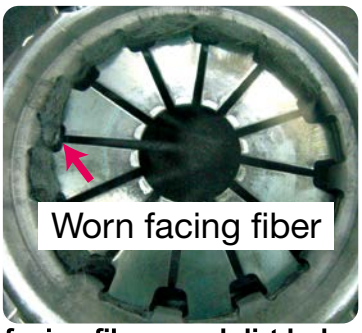

Problem: Worn clutch disc facing fibers and dirt lodged between diaphragm spring and clutch cover housing.

Cause:

Bell housing not degreased and cleaned.
Careless installation of new clutch.

Solution:

Ensure bell housing is thoroughly degreased and clean of dirt and fibers before installing new clutch.

Worn facing fibers and dirt lodged

5.Difficult to disengage gear/ Noisy clutch

Problem: Excessive wear on diaphragm tips

Cause:

1) Misalignment between the axis of release bearing and clutch cover causes this problem. Wear on the fulcrum inside of clutch cover along with the wear on lever tips makes less pressure plate lift, results in difficult to disengage gear.

2) Improper direction of release bearing causes one of abnormal wear.

Solution:

1) Replace the deteriorated bearing or bush parts. Reinstall a transmission after removal of contamination or scratch on the mating surface of bell housing. Replace the deteriorated release bearing and front cover.
2) Install a release bearing in correct direction.

1) Excessive wear on diaphragm tips

2) Excessive wear on diaphragm tips

Malfunction of clutch covers

6.Slipping clutch/ Judder

Problem: Oil or grease contamination on friction surface

Cause:

Excessive grease or low viscosity grease causes this problem.
Melted grease on friction material affected co-efficient of friction and caused slipping or judder.

Solution:

Lightly grease spline, wipe off excessive grease after tentative installation and ensure there is smooth sliding of clutch disc on main drive shaft.

Grease on friction surface

7.Slipping clutch

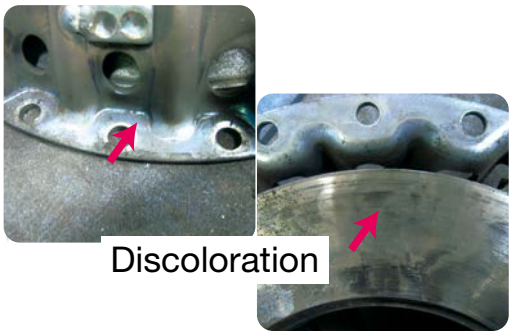

Problem: Discoloration on friction surface and/or clutch cover

Cause:

Extreme friction surface temperature raise under extreme clutch operation. This may cause discoloration of clutch.

Solution:

Driver education not to activate the clutch in excessive semi disengagement position.

Friction surface, cover discoloration

8.Clutch drag

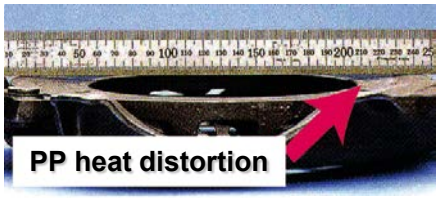

Problem: Warped clutch cover assembly by reuse

Cause:

Insufficient contact due to warped pressure plate.
Only clutch disc was replaced which caused partial contact on friction surface and slipped during heavy load condition.

Solution:

Always replace a clutch disc, a clutch cover and a clutch thrust release bearing when replacing clutch system.

Pressure plate heat distortion

9.Clutch slipping / Noisy clutch

Problem: Hold down bolts still in cover assembly

Cause:

Clutch cover pressure plate assembly hold down bolts to assist ease installation not removed.

Solution:

Remove hold down bolts painted in red.
(Do not remove clutch lever adjustment nuts which are not painted in red)

Remove hold down bolts

10.Judder

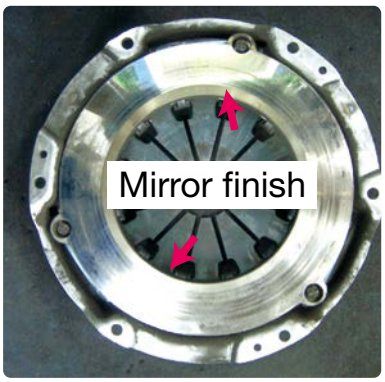

Problem: Mirror finish on pressure plate friction surface

Cause:

1) Friction surface may be ground by worn facing fibers as abrasive compound, if you keep clutch slipping continuously i.e. hill start. It may cause judder because of too good surface to become mirror finish.
2) Clutch slave cylinder corroded or worn and piston not returning freely.

Solution:

1) Driver education not to activate the clutch in an excessive semi disengagement position.
2) Apply proper amount of grease and replace worn out or scratched parts.

Mirror finish on pressure plate

11.No drive/ Noisy clutch

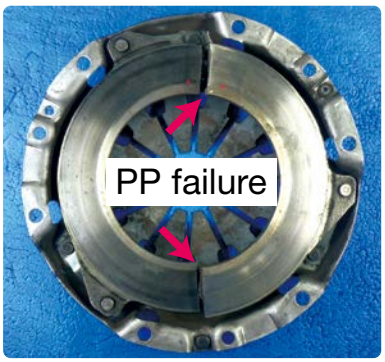

Problem: Burst pressure plate casting

Cause:

1) Over revving of engine that has excessive manufacturers' specifications.
2) Overheating of casting due to constant abuse of clutch. The main spring has weakened through extreme influence of heat.

Solution:

1) Do not use covers where engine has been modified to excess manufacturer's rpm specification.
2) Driver education not to activate the clutch in excessive semi disengagement position.

Breakage of pressure plate

12. Noisy clutch/difficult to disengage the clutch

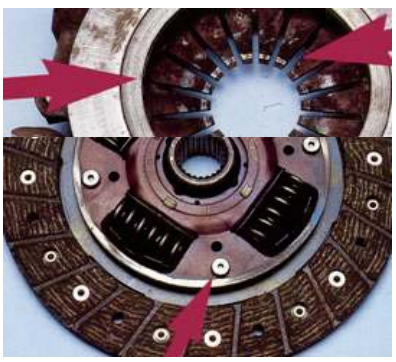

Problem: Interference with the other part

Cause:

Due to the foreign material on the mounting surface, the clutch cover is fixed at a tilt.

Solution:

Check if there are any foreign material on the mounting surface of both clutch cover and flywheel.
If there is, remove the material before installing the clutch.

Interference with the other part

13.Unable to install

Problem: The position of clutch cover holes is not aligned with flywheel

Cause:

The position of mounting holes of flywheel or knock pins might be misaligned due to deformation of flywheel caused by prolonged frictional heat. Therefore, a new clutch cover might not be mounted.

Solution:

Replace the flywheel especially in cases when the vehicle has had multiple clutch replacements or the flywheel was affected by heat (severe discoloration, heat spots on friction surface, etc.)

14. Abnormal clutch noise (incorrect suspect faulty release bearing diagnosis)

Problem: Abnormal sound with foot off clutch pedal (metal squeaking sound). Sound disappears with light pressure or full depression of the clutch pedal is applied.

Cause:

Clutch release mechanism wear resulting in Insufficient release bearing free play (cable system) or preload (hydraulic system) causes light or inadequate contact pressure onto the clutch diaphragm fingers. The noise generated by excessive bearing movement under low load may disappear as the clutch pedal is depressed. Please note this is inconsistent with a faulty release bearing as the noise does not occur under load.

Solution:

Check and replace worn release mechanism parts before installation of new clutch. Adjust the amount of free play at the cable.

Malfunction of others

1.Malfunction of cylinder assembly

Problem: Difficult to disengage gear/ Slipping clutch

Cause:

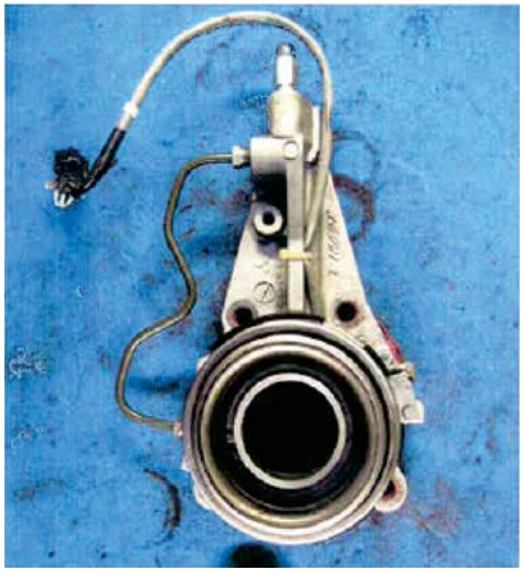

In case of CSC, Concentrated Slave Cylinder, internal piston not traveling smoothly causes system failure, and it may result in following symptom;

Difficult to disengage gear:

1) Fixing or sticky movement causes short stroke and results in difficult to disengage.
2)Leaking oil causes short stroke and results in difficult to disengage.

Slipping clutch:

1) Oil on a friction facing due to leakage from cylinder assembly causes slipping clutch.
2) In case of malfunction in regard to piston return, it causes continuous semi-disengagement and results in slipping clutch as well as facing abnormal wear and burst by burnout.

Malfunction of cylinder assembly

Solution:

Always replace with new cylinder assembly. Install cylinder assembly after ensuring smooth movement.

2.Notchy clutch pedal/ Slipping clutch

Problem: Abnormal wear on front cover, notchy wear

Cause:

Clutch release bearing carrier not travelling smoothly on quill shaft/ gear box nose cone slide.

Solution:

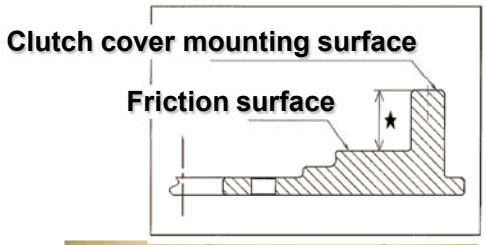

Apply appropriate grease. Renew worn out parts or scratched parts.

Notchy wear on front cover

3.Clutch slipping, premature wear

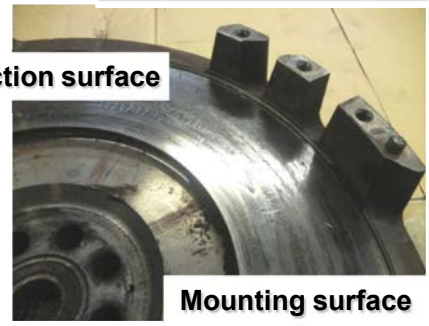

Problem: Reuse of worn flywheel

Cause:

Slipping:
Not enough friction area causes less torque transmittance and results in slipping under heavy load.

Premature wear:
Reuse of worn flywheel is same condition as worn clutch disc, and it results in premature wear.
If you resurface friction surface only, it causes premature wear as well.

Flywheel with deteriorated friction surface

Solution:

1) Replace with new clutch.
2) Use flywheel which has the same dimension as new, the height ★ between clutch cover mounting surface and friction surface shown in figure.

4.Difficult to disengage gear/Noisy clutch

Problem: Reuse of pilot bearing

Cause:

Noise:
Reuse of deteriorated pilot bearing may cause abnormal noise from the bearing under depressing clutch pedal condition.

Difficult to disengage gear:
Reuse of bearing which is not smooth movement causes difficult to disengage gear, because it transmits torque under disengagement condition.

Deteriorated pilot bearing

Solution:

Always replace with new pilot bearing when you replace clutch.

5. Noisy clutch/difficult to disengage the clutch

Problem: Release bearing is damaged

Cause:

Installment failure of release bearing.

Solution:

Check if the bearing is right for the car application before installment.

Caution:
Confirm that the diaphram spring is not damaged from the previous bearing.if the damage can be seen, change the clutch cover as well.

Damaged release bearing

How to Install Clutch

① Check for Clutch Disc Appearance

Be sure to handle the clutch carefully and wear clean cotton work globes.
Check the clutch disc that is being installed to confirm that the facing is not chipped and there are no scratches on the spline hub teeth.

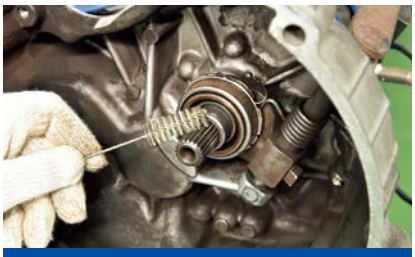

② Check for the Movement of Clutch

If no problem is found, fit the clutch disc onto the transmission's top shaft and confirm that it moves smoothly.

③ Apply the Grease to Spline Hub Teeth

After confirming that the clutch disc moves smoothly, remove it from the top shaft and use brush to apply the grease to spline hub teeth.

④ Apply the Grease to Top Shaft

Also, apply the grease to the top shaft teeth.

⑤ Remove Excess Grease

Fit the clutch disc back onto the top shaft and wipe away the excess grease.
Excess grease could fly off and cause a juddering noise or slipping problems.

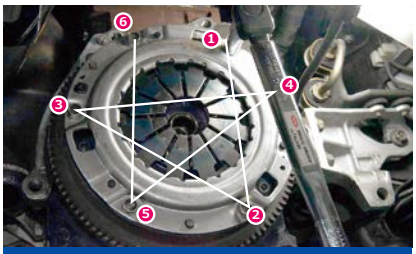

⑥ Check for Clutch Cover Appearance

Confirm there are no scratches or other defects on the friction surfaces of the pressure plate. If there are no problems, use a cleaner to de-grease the pressure plate friction's surfaces.

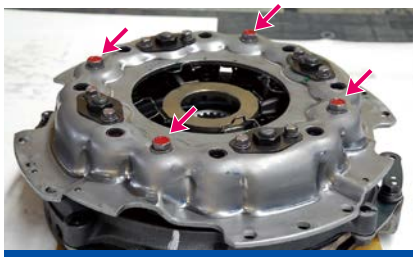

⑦ Installing to Fly Wheel

When installing the clutch, use an alignment tool to settle the clutch disc.
Align the clutch cover with the flywheel's down pins, and temporarily tighten at least three diagonally opposed bolt.

⑧ Tighten Diagonally

Before finishing tightening the bolt, re-confirm that the clutch disc is centered.
Now, tighten the bolt to the specified torque, alternating between diagonally opposed positions. Do not use impact wrench to tighten the bolt. Differences on diaphragm's height can cause juddering noise or other problems.

⑨ Remove Temporary Tightening Part

Clutch cover for middle size and larger vehicles are fitted with red bolts, red wires and red plates for temporary assembly. After installing the clutch, be sure to remove them.
※Check P.56 for your information.

⑩ Reinstalling the Transmission

When reassembling the transmission, position it so that crankshaft and the top shaft are aligned in straight line. While aligning the teeth, carefully insert the top shaft all the way into the clutch disc spline in a single motion.

Stopping midway or forcing the top shaft in could dent spline hub teeth and result in faulty disengagement.

After confirming that the clutch housing is fully contacted with engine's mounting surfaces, tighten the housing mounting bolt to the specified torque alternating between diagonally opposed positions.
Do not use impact wrench to tighten the bolts as the top shaft could be shifted off center.

Correct handling and installation will prevent malfunction of clutch.

EXEDY CORPORATION
AFTERMARKET WARRANTY POLICY

WARNING!

Do not use EXEDY clutches for racing, high performance driving, hot rodding, or any situation where the engine RPM may exceed manufacturer's specifications for the engine.
Pressure plates can explode unexpectedly causing serious injury or death to vehicle occupants and bystanders. Clutch covers and bell housings will not provide protection from exploding pressure plates.
Always use the correct clutch kits for your vehicle application.

LIMITED WARRANTY

EXEDY Corporation in Osaka, Japan, hereinafter called EXEDY, warrants that EXEDY's products are free from defects in workmanship and material under normal use and service.
The obligation of EXEDY under this warranty is limited to the repair or replacement of the defective products, which, within ninety (90) days or within three thousand (3,000) miles after sale thereof to the retail customer or the installation thereof, whichever first occurs. EXEDY's inspection shall disclose to its satisfaction to be defective. Buyer must not return defects without the written consent of seller. EXEDY shall not be liable for any special, direct, indirect, incidental or consequential damages, including claims for delay, loss of profits, or for labour.
No express warranties and no implied warranties either merchantability or fitness for any particular use or purpose or otherwise, other than that expressly set forth above which are made expressly in lieu of all other warranties, shall apply to clutch products sold by EXEDY.
Final determination of the suitability of the products for the use contemplated by the buyer is the sole responsibility of the buyer, and EXEDY shall have no responsibility in connection with such suitability.

EXEDY LIMITED WARRANTY will not be valid under the following conditions:

1. Flywheel was not replaced or resurfaced to specification.
2. Products which have been altered, improperly installed, or damaged by accident, negligence, or misuse.
3. EXEDY products which are re-boxed in non-EXEDY boxes.
4. PRODUCTS USED FOR HIGH PERFORMANCE AND RACING PURPOSES.

Whenever returning parts for warranty consideration, it is required that the entire clutch assembly, pressure plate, disc, and release bearing be returned through an authorized EXEDY distributor.
Shipping charges on the returned parts must be paid by customer of EXEDY Corporation.
